Conceptual Stage Relocation Plan

This report identifies residences and businesses impacted by the project and special relocation needs associated with the SR 87 Connector Project from US 90 to SR 87 N in Milton.

1.0 INTRODUCTION

This Conceptual Stage Relocation Plan is submitted in compliance with Florida Statute 339.09, and the Uniform Relocation Assistance and Real Property Acquisition Act of 1987 (Public Law 91-646).

The purpose of the Conceptual Stage Relocation Plan is to identify residences and businesses impacted by the project and to identify special relocation needs. The plan also discusses community characteristics and analyzes the impact of the project on the community.

1.1 Project Description

The State of Florida Department of Transportation (FDOT) District 3 is conducting a study to evaluate potential corridors that would connect State Road (SR) 87S at US 90 east of the City of Milton to SR 87N. The primary objective of this ***SR 87 Connector*** project is to extend SR 87S to facilitate north/south traffic movement to more effectively serve freight movement and to provide for a more direct hurricane evacuation route from the coast to areas north in Alabama. It also is the intent to reduce congestion in the City of Milton, and to alleviate travel demand on the section of US 90 currently shared by SR 87. Versions of this project have gone through ETDM screening as ETDM Project # 2861 in 2008. However, that project was much more limited in scope and only evaluated a corridor from SR 87S to Munson Highway. On December 19, 2009, the ***SR 87 Connector*** project was submitted for ETDM review as Project #12597.

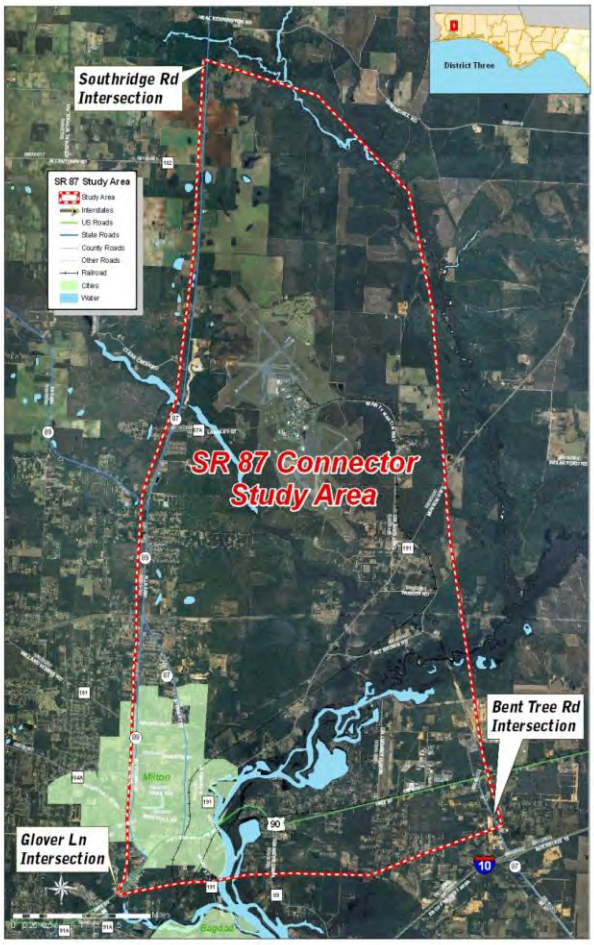

Figure 1: Project Location Map

1.2 Project Purpose and Need

SR 87 is the main north-south artery of Santa Rosa County. It links Milton at US 90 with US 98 at Navarre to the south and Alabama (transitions to Alabama 41 en route to Brewton then on to I-65) to the north. It also serves as a corridor for freight movement north to I-65 as well as a vital evacuation route for northbound traffic. During times of hurricane force winds, both the Escambia Bay Bridge and the Garcon Point Bridge close, leaving SR 87 to the interstate and beyond as the only access out of the beach areas like Gulf Breeze and Navarre, and it is the only access into the area for Emergency First Responders. However, with a portion of the current alignment travelling along a congested portion of US 90 through historic downtown Milton, it cannot function as a contiguous facility. Future growth will continue to constrain this portion of the roadway. Santa Rosa County has grown 173% since 1980 and is expected to grow another 92% by 2030. This increase will put further demand on this roadway, making growth and evacuation difficult due to a lack of capacity on US 90. As a result, Santa Rosa County's Capital Improvements Schedule includes Policy 4.1.E.3: "The County shall continue to request, recommend, and support immediate roadway improvements in order to relieve the congestion on the segment of US 90 between Canal Street and SR 87S".

The purpose of the SR 87 Connector Project Development and Environment (PD&E) Study is to develop a proposed improvement strategy that is technically sound, environmentally sensitive and publicly acceptable. This project is needed to provide for a new roadway facility linking SR 87S with SR 87N. This will serve as an alternative to the existing shared facility of SR 87 and US 90, which is a constrained facility that is currently operating at a failing level of service (LOS) rating of LOS F. Therefore, the primary need for this new corridor is to provide additional capacity, and to improve regional connectivity by providing a more direct route from areas of high growth in northern Santa Rosa County such as the Berryhill Road area, to I-10 and to areas further to the south. Likewise, access will be improved to and from I-10 for the Whiting Field U.S. Naval Air Station, and the County's Joint Use Planning Area near Whiting Field.

1.2.1 Emergency Evacuation

SR 87 serves as a vital evacuation route for northbound traffic destined for I-65 in Alabama. During times of hurricane force winds, both the Escambia Bay Bridge and the Garcon Point Bridge close. This leaves SR 87 to the interstate and beyond as the only access out of the beach areas including Gulf Breeze and Navarre, and serving as the only access into the area for Emergency First Responders. However, with a portion of the current alignment travelling along a congested portion of US 90 through historic downtown Milton, it cannot function as a contiguous roadway. The project will address future projected deficiencies on this established emergency hurricane evacuation route.

1.2.2 Multi-modalism

The project addresses the need for multi-modal connectivity within the County with possible connections to the Blackwater Heritage Trail, the Park N Ride facility at SR 87S and US 90, as well as to the historic SR 1 (newly updated) brick trail enabling area resident's direct access. The Escambia County Area Transit does not provide service to this area of Santa Rosa County; however, in the future if such services were to be provided, the proposed facility would offer greater opportunities in regional network systems for transit. Finally, connection to the proposed Whiting Aviation Park is under consideration. This park will be located on the east side of Whiting Field and will include a 6,000-foot runway, currently under a joint use agreement with the Naval Base.

1.2.3 Social Demand and Economic Development

Santa Rosa County is not only a bedroom community to the greater Pensacola area, but in its own right has also been experiencing considerable growth over the past year. This growth has spurred the need for an improved roadway network. In addition, major traffic generators in the area such as new residential developments, the Santa Rosa Criminal Justice Center, the Santa Rosa Corrections Facility, the Whiting Field U.S. Naval Air Station, the Team Rosa Joint Planning area near Whiting Field, and the Santa Rosa Commerce Park on the US 90 corridor would all benefit from the capacity this facility will provide. The need for the project is also related to committed trips associated with future development in the northern portions of Santa

Rosa County, as well as, the future development near the US 90 corridor, which is hindered by the existing capacity limitations of US 90.

1.2.4 Future Growth

As reported by the Santa Rosa County Land Use Office, Santa Rosa County has grown 173% since 1980 and is expected to grow another 92% by 2030. This increase will put further demand on the US 90/SR 87 segment, making growth and evacuation difficult due to a lack of roadway capacity. In Traffic Analysis Zones adjacent to the corridor, population is anticipated to grow by 2,648 from 2,029 to 4,677, or 131 percent, between 1997 and 2020. Employment is projected to increase by 575 from 908 to 1,483, or 63 percent. The number of dwelling units is forecasted to rise by 1,114 from 827 to 1,941, or 135 percent.

1.2.5 Traffic Data

According to the Santa Rosa County Comprehensive Plan, the current adopted Level of Service (LOS) standard for US 90 is LOS D. In 2008, US 90 from Ward Basin Road to SR 87N had a failing level of service. Without the proposed improvement, the operating conditions will continue to deteriorate. The Raw Model Volume for the 2020 Needs Plan for this new roadway segment is 9,472 vehicles per day. This would provide much needed relief to US 90.

1.2.6 Safety/Crash Rates

The information below contains crash data from the period of 2004 through 2009 according to Florida Department of Transportation TSAT data base.

On SR 87 south, from I-10 to US 90, between mile points 18.500 (I-10) and 19.769 (US 90), there were a total of 86 crashes, 47 of those were with injuries, and 39 with property damage only. The majority of the crashes in this segment occurred at the US 90/SR 87S intersection.

On US 90, from SR 87 south to SR 87 north, between mile points 11.610 and 16.202, there were a total of 234 crashes, 144 of those were with injuries, one fatality and 89 with property damage only. The majority of these crashes were distributed throughout the segment. There was however a slightly higher concentration of crashes at the US 90/SR 87N intersection. The single fatality in the segment occurred at milepost 13.847 just east of Ward Basin Road.
On SR 87N, from US 90 to Southridge Road between mile points 0.004 and 11.362, there were a total of 166 crashes, 113 of those were with injuries and 53 with property damage only. As with the segment along US 90, the majority of these crashes were distributed throughout the segment. There was however a slightly higher concentration of crashes at the US 90/SR 87N intersection.

The SR 87 Connector will include a new roadway to connect SR 87S and SR 87N. Presently, the SR 87 corridor follows along US 90, a congested roadway, for five miles. This portion of the corridor is operating at a LOS F and is the area where the only fatality in the corridor occurred. Improvements to the existing roadway are difficult due to the historic downtown Milton area.

By developing a new corridor that does not follow the existing US 90 alignment, through-travelers would be able to avoid this high traffic area.

1.3 Plan Consistency

The proposed new facility is consistent with the Santa Rosa County Comprehensive Plan, and is also referenced in the County's Capital Improvements Schedule in Policy 4.1.E.3. The Comprehensive Plan design year for this facility is currently 2025, although as the project moves through the next study phase and a formal forecast traffic report is completed, the design year will change to allow for a standard twenty year forecast year to comply with federal guidelines (Design Year 2035). Likewise, the proposed new facility is in the TIP (416748-4; Appendices as on-going project) and the STIP (416748-3 - $1.9M Design for FY 2012), as well as, in the Florida/Alabama TPO five-year work program.

1.4 Existing Facility

The majority of the length of Corridor Alternatives 1 and 2 include a new roadway; however where they intersect SR 87S, they utilize the right of way on a portion of East Milton Rd. In addition, where Alternative 1 intersects SR 87N, it utilizes the right of way of Oakland Dr. Alternative 2 also utilizes a short portion of Harvest Point Dr. at its intersection with SR 87N. No relocations are expected in the areas where right of way expansion may be necessary.

1.5 Proposed Roadway Improvements

Six build corridors have been previously ranked in terms of their effectiveness in meeting the stated project's Purpose and Need, traffic service, cost and environmental impacts. Based on the evaluation analysis, Corridors 1 and 2 resulted as the best and second best options, respectively. Corridors 1 and 2 will be analyzed in this relocation plan.

The proposed improvements include the provision of a four-lane, semi-controlled access divided highway. It is the intent for the project to build an initial two-lane road and as demand warrants the need, expand the road to four lanes. SR 87 south of the project limits is a four-lane divided urban section. The proposed roadway is intended to match the segment to the south. An urban typical section will minimize right-of-way impacts and potential impacts to natural lands. As such, the roadway proposed for all corridors is an urban typical section.

1.5.1 Urban Typical

The urban typical section will consist of four 12-foot travel lanes, five-foot shoulders/bike lanes on each side, a 22-foot median for turn lanes, and five-foot sidewalks on both sides with a three-foot parkway behind the curb and gutter. The overall right of way width required for this roadway would be 102 feet. See **Figure 2** below.

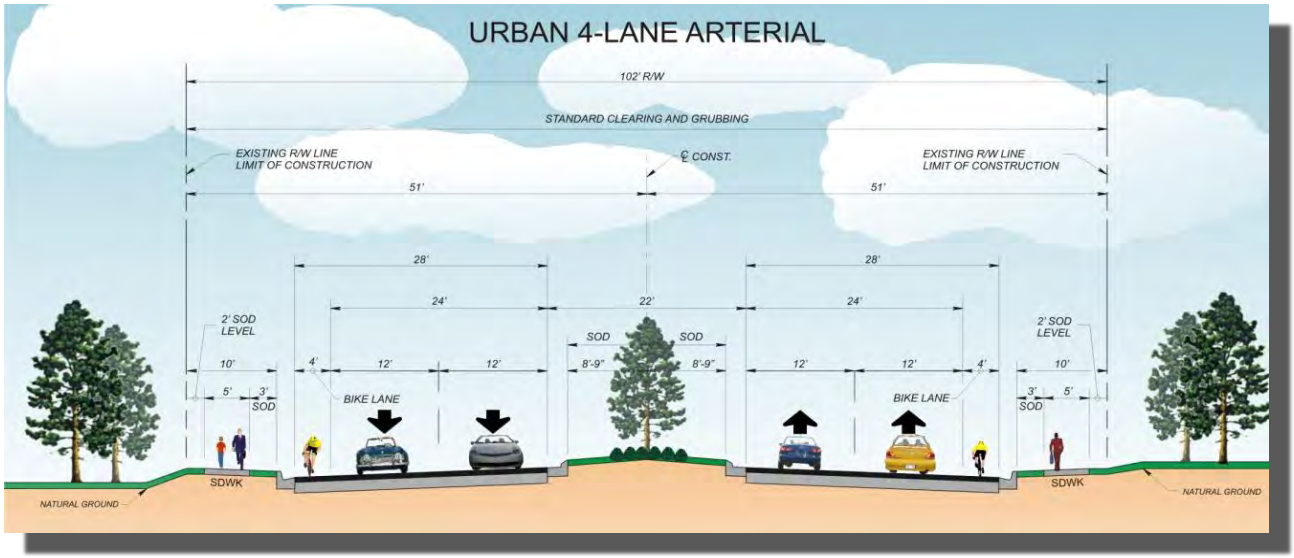

Figure 2: Urban Typical Section

1.5.2 Future Build-out Suburban Section

The future urban section will utilize the interim construction. The crown will be overbuilt to provide a single outside slope for drainage. The interim six and one-half foot inside shoulder will be eliminated with the over-build and replaced with a four foot shoulder. A twenty-two foot median will be provided for landscaping and turn-bays. Two additional north/west bound travel lanes will be added to the typical, along with a six and one-half foot outside shoulder. A five foot sidewalk will be provided with curb and gutter and an eight and a quarter foot parkway.

The suburban typical will be used between the bridge over the Blackwater River and the urban approaches to SR 87N in both Corridors 1 and 2. See **Figure 3**.

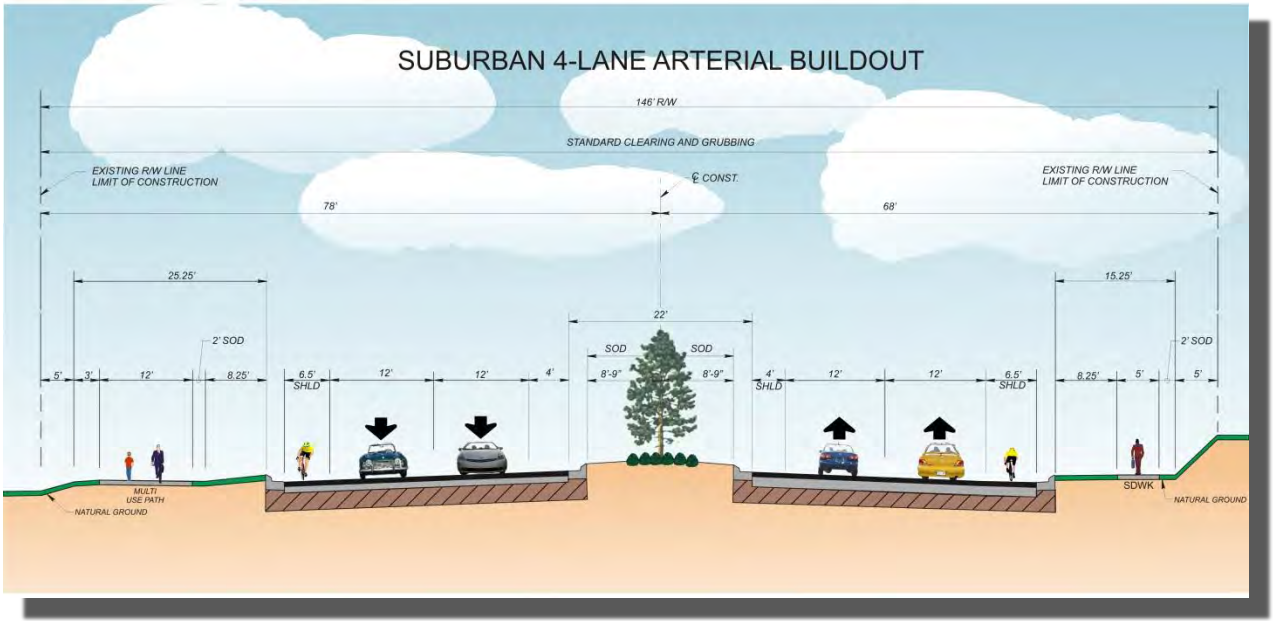

Figure 3: Suburban Typical Section

1.5.3 Bridge Designs

A key component in all of the build alternatives is that a new bridge crossing will be required at the Blackwater River. As part of building the Corridor alternatives, various bridge locations were assessed in an effort to minimize environmental impacts. Working with environmentalists as well as the staff from the Florida Department of Environmental Protection (DEP) and the US Fish and Wildlife Service, three crossing locations were identified. A bridge that could serve potential corridors on the north side of the river was identified at a location immediately adjacent to an existing power line crossing. This location places the bridge in an already disturbed river crossing area. In a meeting with DEP on March 24, 2010, DEP concurred that this location served as the best site for the bridge. For Corridors 1 and 2, there will need to be two additional crossings over Clear Creek south of Whiting Field and over the Blackwater Heritage State Trail and adjacent wetland areas.

The final required bridge lengths will be set during the preparation of the Bridge Hydraulics Report. For the purposes of this preliminary conceptual study, the total bridge length was estimated by extending it beyond the boundaries of the regulated floodway. Also, since the SR 87 connector is designed to be a hurricane evacuation route, the preliminary bridge limits have been set outside the FEMA Flood/Hazard areas. For Corridors 1 or 2, the bridge lengths are anticipated to be: Blackwater River – 3,380 ft. (sta. 191+68 - 225+48); Blackwater Heritage Trail – 1,560 ft. (sta. 238+00 - 253+60); and Clear Creek – 780 ft. (sta. 296+46 -304+26). A typical section of the bridges is depicted following in **Figure 4**.

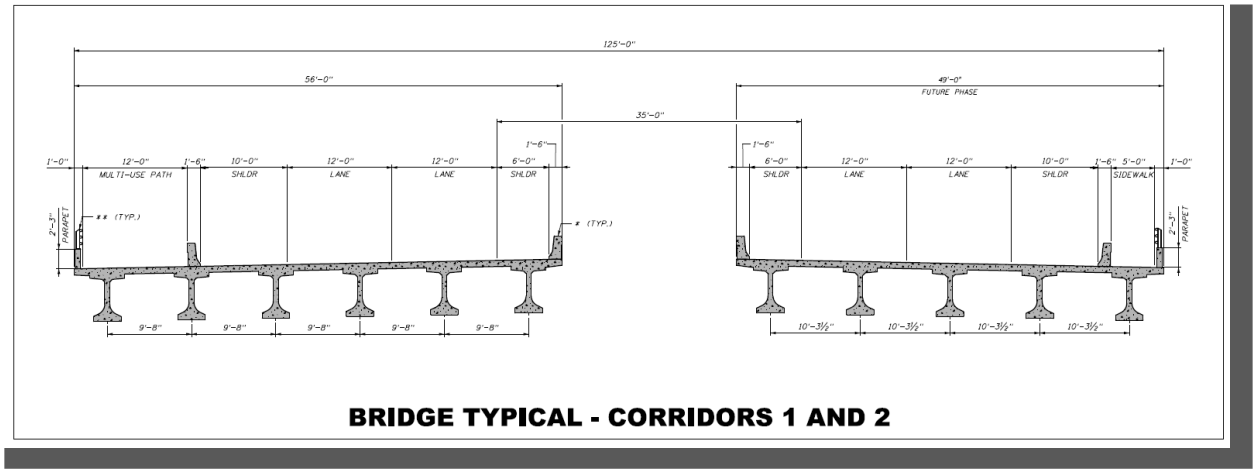

Figure 4: Bridge Typical Section

2.0 STUDY METHODOLOGY

Relocation is considered to be necessary when a business or residence would be directly in the path of proposed construction, when access to a property would be eliminated, or the roadway would cause a reduction in the other characteristics or amenities of the property (such as parking) such that it could no longer feasibly continue its current use at that location.

Information from the PD&E study reports, project maps and aerial photographs were used to identify properties that would be acquired or directly impacted by the proposed project, as well as to identify local community services (**Appendix A**) that could be affected by the project. The analysis of impacts included a review of census data (**Appendix B**) to identify potential social justice issues, parcel data obtained through the Santa Rosa County Property Appraiser website, and listings of properties currently available in the vicinity which are available for potential purchase and relocation to for people, businesses and other entities impacted by this project (**Appendix C**).

Research into available relocation options was conducted using standard real estate listing databases. Lists of relocation and social services were compiled for use by those being effected and are included in the appendices.

Corridors 1 and 2 were analyzed for this report and are depicted in **Figure 4**. Based on available information, 18 parcels were identified within the project area that will be directly impacted by the Corridor 1 alternative and 21 parcels that would be directly impacted by the Corridor 2 alternative. Using this information, as well as a field survey and desktop review, the following relocation information has been prepared.

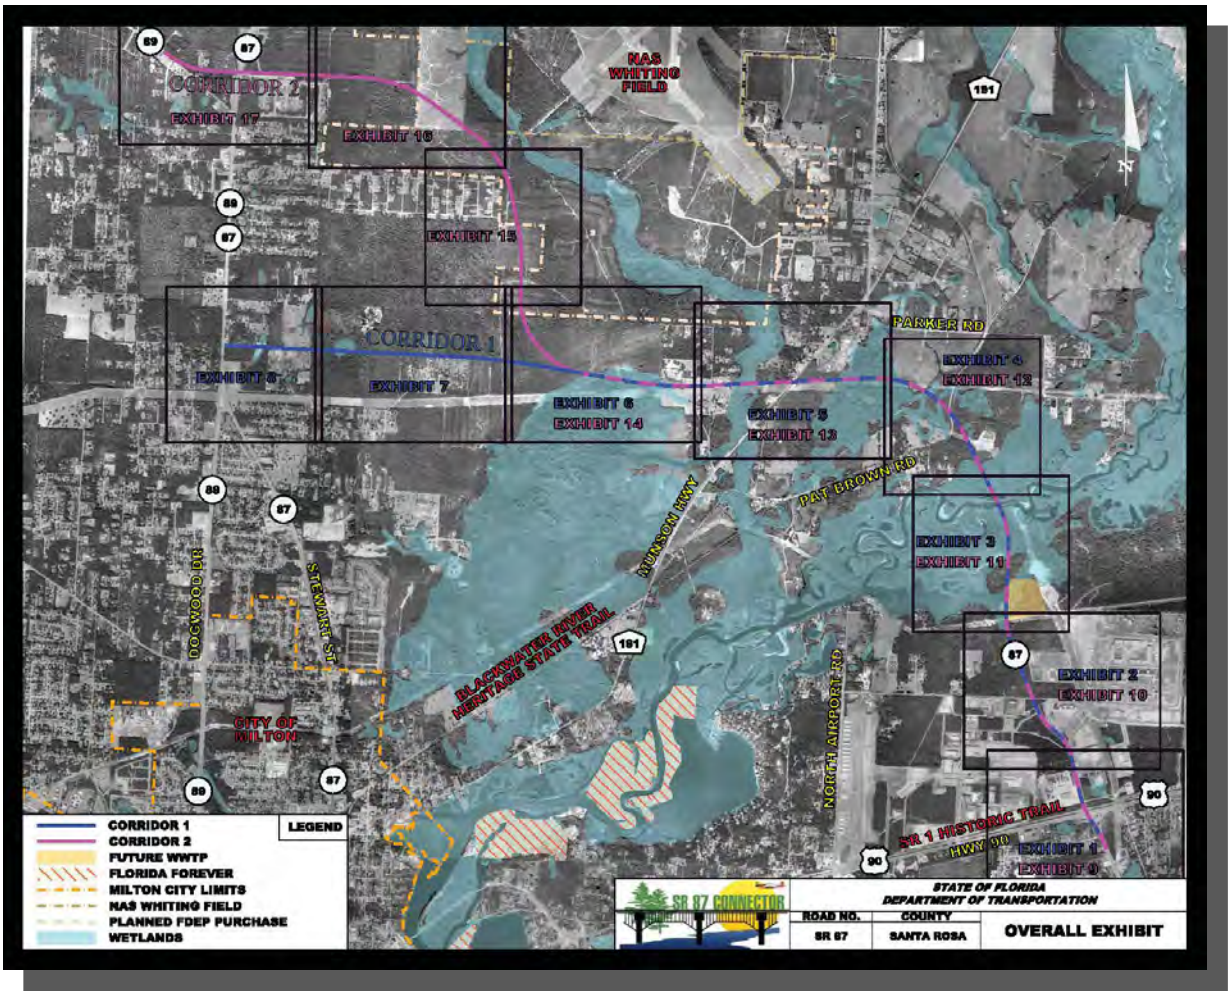

Figure 5: Corridors 1 and 2

3.0 RELOCATION OVERVIEW

At the intersection with Winston Brown Road, both Corridor 1 and Corridor 2 will result in direct impacts to three residential parcels. Two of these parcels will require relocation due to the presence of mobile homes. Other direct impacts at these locations include access impacts and impacts to minor structures (ex: sheds).

Corridor 1 and 2 cross or intersect with SR 87N/SR 89 in different locations, each resulting in direct impacts to properties along that road. Corridor 1 proposes to intersect SR 89 to the south and will directly impact one business on the east side of SR 87N/SR 89, resulting in the potential loss of parking, forced relocation of gas pumps and access issues. The Contamination Screening Evaluation Report (CSER) prepared for this project recommends additional investigation at this location. Corridor 2 will cross SR 87 N further north and will result in additional direct impacts to two residential properties on the west side of SR 87N; one parcel will require relocation as a result of the proximity of the proposed road to the mobile home located on the property. Appendix D contains photos of each of these parcels.

Replacement sites are available to accommodate the successful and timely relocation of displaced parties within the respective residential districts from which they will be displaced. Real estate data acquired from a search of the internet and included in this report (Appendix C) indicate there is currently a surplus of mobile homes and single family homes for sale within the Milton area. This data was collected as of February 22, 2012.

3.1 Estimate of Households to be Displaced

Corridor 1 will result in two residential displacements. Corridor 2 will result in the same two displacements, with one additional as well. **Table 1** below provides details on the residential displacements anticipated as a result of this project.

Table 1: Residential Relocations

Address	Corridor	Owner/ Tenant	Remarks
7097 Highway 87 N	Corridor 2	Unknown	862 square feet, built 1981
7524 Eagle's Way	Corridor 1 and 2	Tenant	798 Square Feet, built 1986
7530 Eagle's Way	Corridor 1 and 2	Tenant	1,064 square feet, built 1985

3.1.1 Minority Displacement

A determination of the race of each occupant being impacted by the proposed project has not been made at this time. However, US Census racial composition data collected for the City of Milton indicates that the majority of the population within the study area is white and of non-Hispanic origin (72.5%). Neither corridor alternative plans appear to disproportionately adversely affect any particular race.

3.1.2 Income Range

The median household income was $54,201 for Santa Rosa County according to the 2009 US Census Statistics. For the same year, the median household income in the City of Milton was $44,314. The income range of those displaced by this project is estimated to be at or below the median household income for the City of Milton.

3.1.3 Tenure of Structures

Corridor 1 and 2 will require relocation of two modular homes constructed circa 1985 and 1986 respectively. Corridor 2 will require relocation of an additional modular home constructed circa 1981.

3.1.4 Elderly Households

A determination of the age of each occupant being impacted by the proposed project has not been made at this time. However, 2010 US Census data collected for the City of Milton indicates that 15% of residents are aged 65 or older, less than the average for the State of Florida. Twenty

seven percent of households include at least one resident 65 years or older. Neither corridor alternative plans appears to adversely affect any particular age group.

3.1.5 Number of Persons in Households

Without primary direct coordination with potential displacees, an accurate determination of household size could not be made. However, the 2010 U.S. Census indicates that the average City of Milton household consists of 2.39 persons, which is slightly lower that the state average of 2.53 persons.

3.1.6 Handicapped or Disabled Relocations

There were no special cases identified on this project such as handicapped or disabled displacements that warrant special assistance. Should special assistance services be necessary, there are ample organizations in the area (**Appendix A**) to assist the relocation agent with specialized help.

3.2 Availability of Decent, Safe and Sanitary Housing

There is an abundance of decent, safe and sanitary housing available for relocatees. **Tables 2 to 5** depict available residential properties, including mobile homes and single family homes, as of February 22, 2012.

Rental or sale properties within the same geographic area were searched, including both mobile homes and single family homes. **Table 2** below includes 61 mobile homes for sale under $200,000 ranging from $15,000 to $160,000. **Table 3** includes 30 mobile homes for rent, ranging from $140 to $1,000 per month. **Table 4** includes 80 homes for sale under $200,000, ranging from $25,000 to $199,000. **Table 5** includes 87 homes for rent, ranging from $500 to $1,895.

Table 2: List of Available Mobile Homes for Sale

Address	Zoning	Type	Price
10352 Westlake Road	Residential	Mobile Home for Sale	$96,500
5280 Short Trail	Residential	Mobile Home for Sale	$160,000

3.3 Special Relocation Advisory Services

There have been no special cases analyzed for this project such as handicapped, low income, racial and/or ethnic populations and disabled displacements or elderly that warrant special assistance. Relocation and other community services information were compiled to assist with residential relocations; these are included in **Appendix A**.

3.4 *Last Resort Housing*

As noted above and listed in **Tables 2** through **5**, search data indicates that there is an adequate supply of available Comparable Decent Safe and Sanitary rental dwellings to meet the needs of

potential displaced persons. At this time, there is no projected need for last resort housing resulting from a lack of available Comparable Decent Safe and Sanitary Replacement Housing within the project and its surrounding areas.

3.5 Estimate of the Number, Type and Size of Business

Business relocations are not anticipated as a result of this project. **Table 6** highlights the business impacts associated with this project. There are photographs of the businesses identified in this section in **Appendix D**.

Table 6: Business and Sign Displacement Summary

Total Displacements	0
Potential Displacements	0
On-Premise Signs	1
Outdoor Advertising signs	0

3.5.1 Businesses to be Displaced

Corridors 1 and 2 do not require the displacement of businesses. Direct impacts are proposed to Reddy's Food Mart located at 6500 SR 87N on the southeast corner at Corridor 1's proposed intersection with SR 87N/SR 89. Proposed impacts are minimal; however, the facility's commercial gas pumps are located at this corner and will require relocation. The gas pump structure also houses the facility's on-premise sign.

3.5.2 On-Premises Sign Relocations

As noted above, the on-premise sign for Reddy's Food Mart at 6500 SR 87N will be impacted by this project.

4.0 EARLY CONSULTATION WITH LOCAL GOVERNMENT

There has been no discussion with Santa Rosa County or the City of Milton specifically regarding relocations.

5.0 IMPACTS ON THE COMMUNITY AND SPECIAL POPULATIONS

This project will likely result in the need for either two or three residential displacements, depending on which Corridor is selected. There are no potential impacts to community services (i.e. churches, community centers, social services, etc.)

6.0 ACQUISITION AND RELOCATION ASSISTANCE RESOURCES

The acquisition and relocation program will be conducted in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended. Relocation resources are available to all residential and business relocatees without discrimination.

Appendix A lists community services available to residents of the area

7.0 POTENTIAL HAZARDOUS WASTE CONCERNS

The Contamination Screening Evaluation Report (CSER) prepared for this project lists 12 sites with a history of contamination along the corridor or in the general vicinity of the project. Sites identified in the CSER that are included in this report as sites with direct impacts and/or potential relocations are listed below with an indication of the site contamination potential ranking. The site is numbered to correspond to the site number in the CSER.

9. **Reddy's Food Mart**, 6500 SR 87 (medium). The gas tanks at this location are within the southwest corner of the property, which is proposed for acquisition.

The CSER recommends additional assessment for any site ranked as medium, which is defined as a site where there may be or there is known contamination associated with the parcel which may impact one or more of the corridor alternatives. While other medium-ranked sites are listed for each corridor, this is the only site where potential contamination is associated with right-of-way acquisition/ direct business impact.

8.0 FUNCTIONAL REPLACEMENT OF REAL PROPERTY IN PUBLIC OWNERSHIP

There are no publicly owned lands or facilities identified that would require functional replacement of real property in public ownership.

9.0 IMPACTS ON CEMETERIES OR BURIAL PLOTS

There are no impacts to cemeteries or burial plots identified in the project area. One lot zoned for cemetery/mortuary use is located west of Winston Brown/Earl Cooley Roads, approximately 100 feet north of the project corridor. The property is currently wooded. No impacts to this parcel are anticipated to occur as a result of the proposed project.

APPENDIX A

ACS DEMOGRAPHIC AND HOUSING ESTIMATES
2006-2010 American Community Survey 5-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2010, the 2010 Census provides the official counts of the population and housing units for the nation, states, counties, cities and towns. For 2006 to 2009, the Population Estimates Program provides intercensal estimates of the population for the nation, states, and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Subject	Milton city, Florida			
	Estimate	Estimate Margin of Error	Percent	Percent Margin of Error

Explanation of Symbols:
An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

For more information on understanding race and Hispanic origin data, please see the Census 2010 Brief entitled, Overview of Race and Hispanic Origin: 2010, issued March 2011. (pdf format)

The ACS questions on Hispanic origin and race were revised in 2008 to make them consistent with the Census 2010 question wording. Any changes in estimates for 2008 and beyond may be due to demographic changes, as well as factors including questionnaire changes, differences in ACS population controls, and methodological differences in the population estimates, and therefore should be used with caution. For a summary of questionnaire changes see http://www.census.gov/acs/www/methodology/questionnaire_changes/. For more information about changes in the estimates see http://www.census.gov/population/www/socdemo/hispanic/reports.html.

While the 2006-2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:
An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

There were changes in the edit between 2009 and 2010 regarding Supplemental Security Income (SSI) and Social Security. The changes in the edit loosened restrictions on disability requirements for receipt of SSI resulting in an increase in the total number of SSI recipients in the American Community Survey. The changes also loosened restrictions on possible reported monthly amounts in Social Security income resulting in higher Social Security aggregate amounts. These results more closely match administrative counts compiled by the Social Security Administration.

Workers include members of the Armed Forces and civilians who were at work last week.

Industry codes are 4-digit codes and are based on the North American Industry Classification System 2007. The Industry categories adhere to the guidelines issued in Clarification Memorandum No. 2, "NAICS Alternate Aggregation Structure for Use By U.S. Statistical Agencies," issued by the Office of Management and Budget.

Occupation codes are 4-digit codes and are based on the Standard Occupational Classification (SOC) 2010. The 2010 Census occupation codes were updated in accordance with the 2010 revision of the SOC. To allow for the creation of 2006-2010 and 2008-2010 tables, occupation data in the multiyear files (2006-2010 and 2008-2010) were recoded to 2010 Census occupation codes. We recommend using caution when comparing data coded using 2010 Census occupation codes with data coded using previous Census occupation codes. For more information on the Census occupation code changes, please visit our website at http://www.census.gov/hhes/www/ioindex/.

While the 2006-2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

SELECTED SOCIAL CHARACTERISTICS IN THE UNITED STATES
2006-2010 American Community Survey 5-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2010, the 2010 Census provides the official counts of the population and housing units for the nation, states, counties, cities and towns. For 2006 to 2009, the Population Estimates Program provides intercensal estimates of the population for the nation, states, and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Subject	Milton city, Florida			
	Estimate	Estimate Margin of Error	Percent	Percent Margin of Error
HOUSEHOLDS BY TYPE				
Total households	3,465	+/-251	3,465	(X)

Explanation of Symbols:
An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2006-2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Milton, FL Residential Houses for Sale

While some in Florida would argue that by definition all homes are residential, this classification of real estate is usually refers to where the property is located, and not the home itself. Residential homes are those in Milton, Florida that are located in areas where the majority of buildings are for housing as opposed to commercial use. On Homes.com, you can also explore other property types including **commercial real estate in Milton Florida**, **land for sale**, **foreclosures**, or even **Milton, FL apartments for rent**. Need more help? We can also assist in finding a

What's Trulia? Trulia is a real estate search engine that helps you find homes for sale and make smarter real estate decisions in the process. How? By analyzing real estate information on millions of homes in Florida and nationwide as well as helping you understand hyper-local Milton real estate trends. Refine your real estate search in Milton, FL by price, number of bedrooms, bathrooms, property type (including townhomes, condominiums and single-family homes), and more. Use our interactive Milton home price map to view real estate activity across Milton ZIP codes and in other cities nearby Milton. See local real estate trends, and compare your home to recently sold homes in Milton and to similar homes for sale in Milton, Florida. View our Milton real estate guide to see average listing prices, sale prices and information for local school districts. Join Milton, Florida community to get in touch with Milton real estate agents, real estate brokers and other real estate sellers and buyers. Compare Milton mortgages from multiple lenders and mortgage brokers to finance your home purchase. Not ready to buy yet? Find and compare Milton Apartments for rent.

What's Trulia? Trulia is a real estate search engine that helps you find homes for sale and make smarter real estate decisions in the process. How? By analyzing real estate information on millions of homes in Florida and nationwide as well as helping you understand hyper-local Milton real estate trends. Refine your real estate search in Milton, FL by price, number of bedrooms, bathrooms, property type (including townhomes, condominiums and single-family homes), and more. Use our interactive Milton home price map to view real estate activity across Milton ZIP codes and in other cities nearby Milton. See local real estate trends, and compare your home to recently sold homes in Milton and to similar homes for sale in Milton, Florida. View our Milton real estate guide to see average listing prices, sale prices and information for local school districts. Join Milton, Florida community to get in touch with Milton real estate agents, real estate brokers and other real estate sellers and buyers. Compare Milton mortgages from multiple lenders and mortgage brokers to finance your home purchase. Not ready to buy yet? Find and compare Milton Apartments for rent.

Description and Terms

Homes sold by Vanderbilt Mortgage and Finance Inc., represent a great value compared to retail. The listings are foreclosures/ repossessed homes being sold 'as-is'. There is no rent or lease option on any of the VMF listings. The asking price is home-only and does not include delivery and set-up costs if move is required. Final accepted offer will be accepted by the Field Manager. Call us at 866-614-8921 to learn more. Properties that will be re-titled in TX or AL may only be purchased by licensed retailers. Buyers in those states must provide RBI or license information.
