Appendix G
SUPPORTING DATA FOR GRAZING ALLOTMENTS

Table G-1 through Table G-6 lists grazing allotments crossed by each alternative route or route variation for each Bureau of Land Management (BLM) field office and the U.S. Forest Service (Wallowa-Whitman National Forest). This information supports the livestock grazing impact assessment in the environmental consequences section included in Section 3.2.7. These tables do not include all of the allotments listed in the affected environment section. These tables disclose only those allotments crossed by the centerline of all alternative routes and variations. However, the affected environment section includes all allotments within a half mile of all alternative routes and variations.

Table G-1. Grazing Allotments for Segment 1

Allotment	Pasture	Jurisdiction	Total Acres of Allotment	Total Active AUMs in Allotment	Total Acres in Pasture	Miles Crossed	Construction Disturbance (acres)[1,3]	Long-term Disturbance (acres)[2,3]	Estimated AUMs Affected[4]
Applicant's Proposed Action Alternative									
Sparks	Sparks	Wallowa-Whitman National Forest	1,362	0	1,362	3.4	71	19	<1
Spring Creek	Spring Creek	Wallowa-Whitman National Forest	22,111	2,275	22,111	1.2	25	7	<1

Spring Creek	Spring Creek	Wallowa-Whitman National Forest	22,111	2,275	22,111	1.2	26	7	<1

Table Notes:

[1]Estimated area of disturbance associated with structure work areas (250 by 250 feet per structure, except along the Bombing Range Road where structure works areas would be 90 by 250 feet), wire tensioning/pulling sites, which includes light duty fly yards (10 acres every 1.5 miles), and multi-use areas, including fly yards (30-acre site located approximately every 15 miles).

[2]Estimated area of disturbance associated with the area occupied by structures (pads) (0.06 acre per structure every 1,200 feet), communication stations (100 by 100 feet, one station approximately every 40 miles), Longhorn Expansion (20 acres), and permanent access roads.

[3]Disturbance calculations include an additional 5 percent contingency.

[4]Estimated AUMs Affected includes only federal grazing allotment AUMs affected. Construction and long-term disturbance acres are for entire allotments regardless of jurisdiction. Thus, disturbance acres are more representative of the effects on forage reductions in the entire allotment as opposed to Estimated AUMs Affected, which identify reductions in forage on BLM and USFS-managed land only. Estimated AUMs Affected were calculated based on the percentage of land within a federal allotment that is disturbed during construction and operations of the B2H Project, as well as the total number of federal AUMs within that allotment. These estimates do not include forage losses that would occur on state and private land crossed by the B2H Project.

Acres and AUMs in table are rounded; therefore, they may not sum exactly.

AUM = animal unit month

BLM = Bureau of Land Management

USFS = U.S. Forest Service

Table Notes:

[1]Estimated area of disturbance associated with structure work areas (250 by 250 feet per structure, except along the Bombing Range Road where structure works areas would be 90 by 250 feet), wire tensioning/pulling sites, which includes light duty fly yards (10 acres every 1.5 miles), and multi-use areas, including fly yards (30-acre site located approximately every 15 miles).

[2]Estimated area of disturbance associated with the area occupied by structures (pads) (0.06 acre per structure every 1,200 feet), communication stations (100 by 100 feet, one station approximately every 40 miles), Longhorn Expansion (20 acres), and permanent access roads.

[3]Disturbance calculations include an additional 5 percent contingency.

[4]Estimated AUMs Affected includes only federal grazing allotment AUMs affected. Construction and long-term disturbance acres are for entire allotments regardless of jurisdiction. Thus, disturbance acres are more representative of the effects on forage reductions in the entire allotment as opposed to Estimated AUMs Affected, which identify reductions in forage on BLM and USFS-managed land only. Estimated AUMs Affected were calculated based on the percentage of land within a federal allotment that is disturbed during construction and operations of the B2H Project, as well as the total number of federal AUMs within that allotment. These estimates do not include forage losses that would occur on state and private land crossed by the B2H Project.

[5]Allotments labeled as "unallotted" are BLM-administered lands not officially assigned to a particular livestock permit. These lands are not closed to livestock grazing and could be assigned to a permit in the future.

Acres and AUMs in table are rounded; therefore, they may not sum exactly.

AUM = animal unit month

BLM = Bureau of Land Management

USFS = U.S. Forest Service

Allotment[5]	Pasture	Jurisdiction	Total Acres of Allotment	Total Active AUMs in Allotment	Total Acres in Pasture	Miles Crossed	Construction Disturbance (acres)[1,3]	Long-term Disturbance (acres)[2,3]	Estimated AUMs Affected[4]
Tunnel Canyon	Tunnel Canyon	BLM Malheur Field Office	13,123	1,380	9,524	4.1	89	25	3

Table Notes:

[1]Estimated area of disturbance associated with structure work areas (250 by 250 feet per structure, except along the Bombing Range Road where structure works areas would be 90 by 250 feet), wire tensioning/pulling sites, which includes light duty fly yards (10 acres every 1.5 miles), and multi-use areas, including fly yards (30-acre site located approximately every 15 miles).

[2]Estimated area of disturbance associated with the area occupied by structures (pads) (0.06 acre per structure every 1,200 feet), communication stations (100 by 100 feet, one station approximately every 40 miles), Longhorn Expansion (20 acres), and permanent access roads.

[3]Disturbance calculations include an additional 5 percent contingency.

[4]Estimated AUMs Affected includes only federal grazing allotment AUMs affected. Construction and long-term disturbance acres are for entire allotments regardless of jurisdiction. Thus, disturbance acres are more representative of the effects on forage reductions in the entire allotment as opposed to Estimated AUMs Affected, which identify reductions in forage on BLM and USFS-managed land only. Estimated AUMs Affected were calculated based on the percentage of land within a federal allotment that is disturbed during construction and operations of the B2H Project, as well as the total number of federal AUMs within that allotment. These estimates do not include forage losses that would occur on state and private land crossed by the B2H Project.

[5]Allotments labeled as "unallotted" are BLM-administered lands not officially assigned to a particular livestock permit. These lands are not closed to livestock grazing and could be assigned to a permit in the future.

Acres and AUMs in table are rounded; therefore, they may not sum exactly.

AUM = animal unit month

BLM = Bureau of Land Management

USFS = U.S. Forest Service

Table Notes:

[1]Estimated area of disturbance associated with structure work areas (250 by 250 feet per structure, except along the Bombing Range Road where structure works areas would be 90 by 250 feet), wire tensioning/pulling sites, which includes light duty fly yards (10 acres every 1.5 miles), and multi-use areas, including fly yards (30-acre site located approximately every 15 miles).

[2]Estimated area of disturbance associated with the area occupied by structures (pads) (0.06 acre per structure every 1,200 feet), communication stations (100 by 100 feet, one station approximately every 40 miles), Longhorn Expansion (20 acres), and permanent access roads.

[3]Disturbance calculations include an additional 5 percent contingency.

[4]Estimated AUMs Affected includes only federal grazing allotment AUMs affected. Construction and long-term disturbance acres are for entire allotments regardless of jurisdiction. Thus, disturbance acres are more representative of the effects on forage reductions in the entire allotment as opposed to AUMs Affected, which identify reductions in forage on BLM and USFS-managed land only. Estimated AUMs Affected were calculated based on the percentage of land within a federal allotment that is disturbed during construction and operations of the B2H Project, as well as the total number of federal AUMs within that allotment. These estimates do not include forage losses that would occur on state and private land crossed by the B2H Project.

Acres and AUMs in table are rounded; therefore, they may not sum exactly.
