Re: Liberty Natural Gas LLC, Port Ambrose Deepwater Port
Draft Environmental Impact Statement
Docket ID: USCG-2013-0363

Comments:

IND915-1

I'm writing to you today to express my distaste for the Port Ambrose LNG terminal for the following reasons. LNG is well known climate polluting fossil fuel that would hinder New York greenhouse emission goals. Vaporization operations at Port Ambrose would potentially release 183,420 tons of CO2 equivalent into the atmosphere. LNG is a dangerous substance which can cause frostbite due to rapid freezing of body tissue.

Thank You for your attention

Sincerely,

Name: Julie Gennusa

Re: Liberty Natural Gas LLC, Port Ambrose Deepwater Port
Draft Environmental Impact Statement
Docket ID: USCG-2013-0363

Comments:

- IND949-1 Port Ambrose is a bad idea for NY. First, this project would directly compete for space with offshore wind projects. Offshore wind is critical in meeting NY's goal of an 80% reduction of climate pollution by 2050 and producing 50% of energy from wind by 2050. Second, of the three LNG import terminals to be constructed in the U.S., 2 have not received shipments of LNG since 2010 and the 3rd, has been dismantled. Unless converted to an import terminal, Port Ambrose is doomed to a similar fate. Exporting LNG third, investment in natural gas infrastructure will deepen our dependence on fossil fuels and lead to more hydrofrack, i.e. Finally, LNG facilities in NY Bight would pose a terrorist threat. No matter which way you spin it, Port Ambrose Sincerely, is a bad investment.

I'm writing to you today to express my distaste for the Port Ambrose LNG terminal for the following reasons

IND950-1

Domestic markets for gas will drive down costs to the point where natural gas operation will not turn a profit. Since gas is selling at a much higher rate in other countries exporters would be more viable. It will create an environmental disaster and is potentially dangerous to public health.

IND950-1 See response to IND71-1.

IND950-2

Its location is prime real estate for future Terrorist attacks due to the fact that the LNG terminal will be housed close to many international terminals in New York. It also competes against offshore wind energy projects

IND950-2 See response to IND23-1.

IND950-3

Thank you for your attention

IND950-3 See response to IND269-1.

Sincerely,

Name: Julie Gennusa
Address: 4324 Broadway Island Park NY 11558
School: Nassau Community College.
Email: Juliegennusa@gmail.com.

Natural gas on paper may seem like a good idea on paper,
but in reality, it's a highly dangerous, highly illogical
plan. The chances of liquefied natural gas having
a leak or worse is very high. Wind power is
a more useful & highly effective plan. I'd
feel more comfortable knowing that there is
a wind powered facility installed compared to
a liquefied natural gas facility.

Re: Reform Energy Vision Initiative

IND1087-1

New York State has always been one of the leaders in this country for political policies. We should continue this tradition by leading the country with environmental policies. We should enable more policies that help all efforts to make a more environmentally stable future. Because this is the only path that we have we should continue to care for it as much as possible. Any environmental policies that are not moving towards a more sustainable future are moving in the wrong direction. (Specially Port anbruse and the LNG plant that could be used for a wind farm and will not only create more jobs but also give us a near permanent energy source and continue to move us away from fossil fuel facts.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1142-1

The proposed LNG Facility at Port Ambrose is a dangerous alternative to proven renewable energy solutions. As New York works to increase its production of renewable energy, a reliance on fuel of the past will only drive us further into the past. Port Ambrose's own Environmental Impact Statement has shown that annually, the facility could release more than 180,000 tons of CO2 equivalents into the air. At a time when the state should be focused on newer, greener technologies, we cannot afford to rely on the fuel of the past.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1143-1

My family travels to Jones Beach several times a summer to escape the heat of Brooklyn and appreciate one of the great natural beauties of our area – the ocean. I see children swimming there, fisherman trolling the water, world-renown musical acts performing at the Nikon Theater, and most importantly family traditions. There are families that I see in the same field every year. Kids look forward to the heat of the summer so we can escape to the beach, get some sun, and go for a swim. The proposed facility near Jones Beach is frightening to me for several reasons. Liquefied Gas is dangerous – it has led to explosions and commands a huge safety radius around any facility. I fear that a facility off of Jones Beach will impact our fishermen and other shipping lanes into New York City. I also fear that any accident could permanently damage the ecosystem that is so important to everyone who goes to Jones Beach.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1144-1

New York has made a commitment to use 30% renewable energy by this year. However, as of today we are only at 23%, with a long way to go to meet this goal. As state entities seek reliable, renewable energy, it is absolutely the wrong time to be looking towards the energy of the past – gas. By 2025 we are supposed to be at 50% renewables, yet we haven't even hit our 2015 goal yet. The efforts that are being put into research and execution of an LNG facility at Port Ambrose should instead be focused on attaining the renewable energy marks that we have already agreed to as a state. We have a high capacity for wind, hydro and solar power and we need to switch our focus to these energy sources today.

IND1145

Re: Port Ambrose LNG Facility

March 9, 2015

IND1145-1

A little over 40 years ago, just a couple miles from where I sit writing this comment, nearly 40 workers were killed when Staten Island's LNG transfer station exploded. This deadly blast showed us the danger of this energy source and as a state, we have been wise to avoid it since then. So why now are we again discussing LNG? In a time where our state recognizes the need to move towards renewable energy, the Port Ambrose proposal is a step in the wrong direction. Please seek cleaner, greener technology, not that which has caused us harm in the past.

IND1146

Re: Port Ambrose LNG Facility

March 9, 2015

IND1146-1 The Port Ambrose LNG Proposal is frightening to our environment, but may be more frightening to our economy. Today, 3 similar facilities have been constructed in the United States. Two, Neptune Deepwater, and Northeast Gateway Deepwater combined to cost \$750 million to build, yet neither have received a gas shipment in the past 5 years. Hess LNG recently abandoned another similar proposal near Massachusetts, due to "unfavorable market conditions." If we know that NY needs clean energy, and we know that these LNG facilities are nothing more than outdated money pits, why is this proposal even on the table?

Gina Ruiz
Manhattan, NY

IND1146-1 See response to FA4-2 for a discussion of purpose and need, and peak demand.
As stated in Section 1.1 of the final EIS, the increased natural gas supply in New England for the winter of 2014-2015, including LNG imports from the Northeast Gateway Deepwater Port, off the coast of Boston, Massachusetts, contributed to reduced average wholesale energy prices from an average of \$138 per megawatt hour in the winter of 2013-2014, to an average of \$77 per megawatt hour in the winter of 2014-2015 (ISO New England 2015). Increased fuel supply during the winter peak demand directly contributed to the lower price levels in 2014-2015 (ISO New England 2015).

To: The United States Coast Guard and Maritime Administration
CC: Governor Andrew Cuomo

IND1147

Re: Port Ambrose LNG Facility

March 9, 2015

IND1147-1

Just two months ago, New York State made one of its wisest environmental decisions in my lifetime – banning high powered hydraulic fracturing. We know that the technology is not safe, we know that these methods can harm people’s drinking water and we as a state took a stand that no other state over a major shale deposit has made. Yet now, we explore a directly connected technology in the LNG facility at Port Ambrose. This proposal undermines the efforts of all those who worked to ban fracking, and makes a dangerous statement that this LNG could be safe in our communities. New York needs to focus on renewable energy and make a firm statement by moving away from these LNG proposals and all efforts related to fracking in our region.

IND1148

Re: Port Ambrose LNG Facility

March 9, 2015

IND1148-1

Where are our priorities? The water off of New York are important to all New Yorkers for so many reasons. We relax at Jones Beach, and swim in the waters all summer. We rely on the shipping lanes that bring us goods from all over the world. We cannot put these needs in jeopardy. The proposed facility at Port Ambrose would not only be an eyesore to beachgoers and potentially dangerous if it malfunctioned, it would also command a 1600 foot radius safe zone – meaning nearly 2.5 square miles of avoidance for ships. We need to prioritize clean, renewable energy, not facilities which will affect our precious water.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1152-1

The LNG facility at Port Ambrose will feature gas that is 95-98% methane. Methane, over a 20 year period is 86 times more potent than CO2. We know Climate Change is real, we know that we are causing it, so it is time to make a real stand. Take the space off the shore of Jones Beach and turn it into wind turbines. Or harvest the flows of the ocean into hydroelectric power. Historically these facilities cost hundreds of millions of dollars, let's use that money for research towards real, clean energy...not LNG.

Re: Port Ambrose LNG Facility

March 11, 2015

IND1157-1

For the most part I think the Port Ambrose project can actually be harmful in the long run especially with it being in New York. Since the LNG is composed of methane gas which is a greenhouse case, it can actually cause harm to the area and increase greenhouse gases. Also since the U.S-China treaty that was written last year to decrease greenhouse gases and carbon emissions proposing another terminal could cause the decline of harmful gases but the level of control of the terminal with MARAD vs. Everyone else can be questioned more than ever. This can harm New York specifically due to the level of emissions that is emitted within the city alone. But this could be beneficial if the terminal is helping the greenhouse gases to decrease is a heavily greenhouse dense city.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1166-1

In Japan, China and India, Natural Gas is selling at much higher rates than here in the US. Operators of the existing LNG facilities in the US are already exploring the option of converting their importing facilities to exporting facilities. Here in New York - a shale-rich state which has just banned fracking – that switch could be very dangerous to the huge environmental victory achieved this past December. If Port Ambrose were built and used as an export facility, our neighbors in Pennsylvania will surely feel the increased demand for fracked gas, and New York would undoubtedly face a new fight over the technology. Too many caring people have worked too hard to ban fracking. Lets keep it out of the conversation for good. No LNG at Port Ambrose.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1168-1

Seven hundred and fifty million dollars were spent to build LNG Ports at Neptune Deepwater and Northeast Gateway Deepwater. Seven hundred and fifty million dollars. For all that money they must be turning a huge profit now, right? They must be bringing in millions of gallons of gas each year, right? That must be why we want one in New York: big bucks. What's that? Oh, Neptune and Northeast Gateway haven't accepted a shipment since 2010? Then why do we need more? The one thing that gas has going for it in 2015 is that it is making money for someone. It's harmful to the planet, it's a nightmare to clear environmental protection procedures to extract or import the stuff. If someone is not making money off it, there is literally no point in continuing to use it. The hundreds of millions of dollars that would go to Port Ambrose construction should be used for something else. Literally anything else. Clean energy would be great, rebuilding of Sandy-affected communities would be great. But literally anything else. Not LNG. Not today. Not ever. We can't afford it.

Re: Port Ambrose LNG Facility

March 9, 2015

Transcript of the board meeting at Evil Empire headquarters:

CEO: Well (white, rich) gentlemen, we have been foiled again. Our plans to poison upstate water, destroy infrastructure and pollute air has been foiled. Yes, activists have banned fracking in New York. How dare they prioritize health and safety over our need to make a quick buck?!

COO: This is just like a few years ago when we planned to poison inner-city low income communities through trash incinerators, Um, I mean- "waste to energy" facilities. Those dirty hippies stopped us then too!

CEO: So what now? Who is our next target? How about fishermen. We haven't hit them hard in nearly a decade. Yes those coal fired power plants did a number on our upstate lakes and fisheries but now its time to go bigger – the Atlantic Ocean!

COO: Its genius, offshore wind turbines!

IND1169-1 CEO : No, you idiot, that's clean and green! We need offshore death! How about LNG ports? They are prone to explosions – like in Staten Island in 1973 – they suck up fishing and shipping lanes and they will be an eyesore to all around us. HAHAH its perfect!

(This is how students see the powers that be. Don't be this guy. Stop LNG.)

Jonathan Akers.

Re: Port Ambrose LNG Facility

March 9, 2015

LNG By the numbers:

40: Number of workers killed at LNG Explosion in Staten Island in 1973

95-98: Percentage of LNG that is methane.

183,000: tons of CO2 equivalents that Port Ambrose would put in our atmosphere annually.

23: percentage of NY's energy that currently comes from renewables

30: percentage of renewable energy that was promised to New Yorkers by 2015.

IND1170-1 | LNG is dangerous to people, harmful to our environment and moves us away from the renewable energy we need.

No LNG in NY!

Re: Port Ambrose LNG Facility

IND1171

March 9, 2015

IND1171-1 Liquefied Natural Gas is super cooled to -260 degrees Fahrenheit. Vaporized natural gas at high concentrations can cause suffocation and workers risk cryogenic damage including rapid onset frostbite or even death from the super cooled gas. Aside from the daily danger to workers, an LNG facility near New York City would be a target for terrorist attacks. Terrorists understand how deadly a mishap at this facility could be. The Coast Guard needs to also recognize the danger.

Re: Port Ambrose LNG Facility

March 9, 2015

For 40 years, New York has spurned LNG facilities with good reason. In 1973, 40 workers died in my home borough when an LNG facility was being built. Back then, we didn't know how dangerous LNG could be. Now we do. In addition to that, we also now know how to create energy through clean and green technologies -- like wind and solar power. In Niagara Falls, hydroelectric power is king. We understand that this clean technology can be harnessed. Why look to the past? LNG poses danger to our communities and is harmful to our progress towards renewable energy. As a student of the College of Staten Island, I urge you to ban the LNG facility at Port Ambrose.

Re: Port Ambrose LNG Facility

March 9, 2015

Our natural ecosystem is constantly under attack. As the human population continues to grow, we stretch out further and further into areas where flora and fauna have long reigned. The last two presidents have made attempts to lease our National land to gas drillers. Our representatives in Staten Island have okayed the private takeover of Mount Manresa, an important resource for animals in Staten Island. Now our water offshore is under attack. An LNG facility at Port Ambrose could pose a real threat to sea creatures, and could have long lasting effects on recreation and tourism for New York. Staten Islanders know the dangers of sacrificing our natural resources for a profit. Stop construction on Mount Manresa, and stop LNG at Port Ambrose.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1174-1

Liquefied Natural Gas. It sounds so nice. Natural. But it's not natural. The sun is natural. The wind is natural, the water is natural. Let's get our energy from real natural sources. Let's stop putting our animals and people in harm's way just to appease the owners of big oil and gas. At the very least, let's call a spade a spade, and rename Port Ambrose "New York's Regressive Energy Facility."

Re: Port Ambrose LNG Facility

March 9, 2015

IND1176-1

Sustainability should be the centerpiece of all discussions of energy in New York State. New York is currently working under a plan to use 30% renewables by 2015 and 50% by 2025. Unfortunately, we are lagging behind – as of today we are right around 23% renewables. In order to get to our target goals, we need to shift al our attention to renewables. Facilities like the proposed Port Ambrose LNG Port keep us in the past. If we want to be leaders in the world of sustainability, we need to ditch these old technologies and bring New York more Solar, Geothermal and Wind power.

Re: Port Ambrose LNG Facility

March 9, 2015

IND1178-1

For many years, New York has led the charge on so many issues. As a large, powerful state with nearly 20 million residents, our neighboring states look to us to set the tone on things like energy usage, and fiscal responsibility. A facility at Port Ambrose would cost hundreds of millions of dollars, and there is no guarantee that that money would be made back – in fact 2 of the United States’ 3 existing LNG facilities have not received a shipment since 2010. There is clearly no demand for this. Let’s continue to be a leader, ban LNG.

L. Funiga

IND1179

Re: Port Ambrose LNG Facility

March 9, 2015

IND1179-1

"Unfavorable market conditions," "bad investment," "struggling to turn a profit" all these phrases have been used to describe the US's current LNG ports. In fact, more than \$750,000,000 was spent to build 2 ports, neither of which have received a shipment of gas in nearly 5 years. In Massachusetts, a plan for a similar facility was scrapped because there is no market for it. No private company in the world would consider a business which has such poor projected revenue. If the United States wants to subsidize energy costs, it should focus on the energy of the future – sustainable sources like solar and wind. Money allocated for research and construction of sustainable energy facilities will go much further to improve our economy than the outdated LNG facilities proposed here.

IND1180

Re: Port Ambrose LNG Facility

March 9, 2015

IND1180-1

No LNG. Not now, not ever. Through the lifecycle of natural gas (including extraction, liquification, transportation, vaporization, and use) air pollutants are released into the atmosphere. At Port Ambrose, Vaporization Operations are projected to release more than 180,000 tons of CO2 equivalents into the atmosphere annually. This goes against NY's plan to get to 50% renewables by 2025, and I as a New Yorker will not stand for this.

Re: Port Ambrose LNG Facility

IND1183

March 9, 2015

IND1183-1 As a student in a community directly affected by the dangers of LNG, I would like to go on record in opposition to the facility at Port Ambrose. In 1973, 40 Staten Islanders were killed in an explosion at an LNG facility. For 40 years, LNG has been avoided in New York because of the danger. We cannot afford to lose more New Yorkers to this dangerous fuel. A facility at Port Ambrose could pose a real danger to employees and wildlife. In 1973, we didn't know as much about renewables as we do today, so that mistake can be forgiven. But in 2014, we know the dangers of LNG and we know the alternatives. No need to make the same mistakes we have made in the past. That's why I say – reject the Port Ambrose proposal.

Comments:

The Long Island coast is beautiful & should be preserved not exploited by corporations. This proposed project will be harmful to Long Island, the coast, the ocean & all the wildlife in the ocean. Instead of moving forward with alternative energy this project aims to keep us dependent on the outdated & dangerous fossil fuel supply. Long Island has still not recovered from Hurricane Sandy. If another superstorm was to hit Long Island again in the future this project can add to the devastation. As a resident of Long Island I am strongly opposed to this Deepwater Port.

Re: Liberty Natural Gas LLC, Port Ambrose Deepwater Port
Draft Environmental Impact Statement
Docket ID: USCG-2013-0363

Comments:

As a student of Queens College and resident of the State of New York, I find it wrong that Port Ambrose wants to store LNG gas in New York after the State had banned hydrofracking. When the State of New York banned fracking, it also includes the product coming from this process. Allowing LNG Gas to be stored in NY will violate the ban on hydrofracking, which any law abiding citizen (including corporations) should be against. Any individual who fears God knows that destroying our environment can bring God's wrath through natural disasters. Please keep God's happy by keeping any remnants of hydrofracking out of New York State.

IND1240-1

Sincerely,

Name: Deneese Ortiz, (God fearing individual)

Comments:

IND1248-1

I would like to voice my opposition to the approval of the proposed LNG station at Port Ambrose. With lack of regulation and the environmental disasters linked with this company, I do not believe this station would benefit the area, and will further perpetuate environmental risks like climate change.

Sincerely,

Name: Sarah Kostecki

Address: Flushing, NY

School: Queens College, CUNY

Comments:

Hey, I'm a student at Queens College. If we're
to move forward as a state, country or world
we need to find other sources of energy aside
from fossil fuel. As I'm sure you're aware
Nicolai Tesler here had some ideas on renewable
energy. I would suggest funding research
for that instead. If we allocate
our resources to find renewable energy
we can progress much faster. If we invest
as much capital as we do on war and oil
we wouldn't be reliant on limited fuels. Thanks

IND1250-1

Draft Environmental Impact Statement
Docket ID: USCG-2013-0363

Comments:

IND1251-1

I'm writing to request that the idea of Port Ambrose should be dismissed. The proposed liquid natural gas terminal would only increase pollution and dependency on fossil fuels which would directly oppose the energy efficient and beneficial greenhouse gas emission reductions goals. Please keep in those lines to promote safer and cleaner air. Thank you for your time.

IND1259-1

I am against the liquified natural gas terminal proposed on Long Island. The effects of leaking methane can have detrimental effects on both the environment and the health of nearby residents.

Sincerely,

Name: Jesse McDade

Address: 536 B 126th St. Belle Harbor, NY 11694

School: Brooklyn College

Email: jmcdade1@binghamton.edu

CC: Governor Cuomo

IND1259-1 Methane itself is not a toxic gas, and presents no immediate health or safety risk to nearby residents or the local environment at the extremely low concentrations that would occur due to fugitive leaks. Methane's chief environmental impact is as a contributor to global warming and climate change, which occurs on a global rather than local scale.

To: U.S. Coast Guard and the Maritime Administration
Re: Liberty Natural Gas LLC, Port Ambrose Deepwater Port
Draft Environmental Impact Statement
Docket ID: USCG-2013-0363

Comments:

IND1262-1 Nearly 99.9% of scientists agree that global warming is already having huge environmental impacts. In order to combat the devastating consequences of climate change, New York needs to reduce greenhouse gas emissions by 80% by 2050. This means that we can no longer afford to rely on natural gas infrastructure. Allowing the proposed liquefied natural gas terminal to become part of New York's energy plan stands in direct opposition to this necessity. Do not further the crisis by allowing the use of toxic chemicals like methane to once again threaten the safety of New Yorkers and of our environment.

To: U.S. Coast Guard and the Maritime Administration
Re: Liberty Natural Gas LLC, Port Ambrose Deepwater Port
Draft Environmental Impact Statement
Docket ID: USCG-2013-0363

Comments:

It is absolutely crucial that New York does not allow the Port Ambrose Liquefied Natural Gas terminal to come to Long Island. Not only would it be competing with space for offshore wind projects (which are important for energetic sustainability) but it would also be detrimental to the environment and is not going to help New York meet goals for the reduction of fossil usage. This proposal is negative overall for the people, for the future of the state and for the future of the environment that is already facing record breaking changes. Stop this from passing now!
