- 12. DRILLING RIG: 8' X 45'
- 13. SURVEY TRAILER: 8' X 25'

EQUIPMENT:

- 1. SPOIL CONTAINER: 8' X 20'
- 2. SHAKER: 8' X 12'
- 3. DESILTER: 8' X 8'
- 4. MUD RIG: 8' X 25'
- 5. SUPPLY TRAILER: 8' X 25'
- 6. EXIT PIT: 8' X 10'
- 7. STORAGE: 30' X 30'
- 8. VEHICLE PARKING: 15' X 50'
- 9. DEWATERING UNIT: 8' X 20'
- 10. PIPE TRAILER: 8' X 40'

NOTES:

1. SET UP DRILLING EQUIPMENT A MINIMUM OF 100 FEET FROM THE EDGE OF THE WATERCOURSE. DO NOT CLEAR OR GRADE WITHIN THE 100 FOOT ZONE.
2. ENSURE THAT ONLY BENTONITE BASED DRILLING MUD IS USED. DO NOT ALLOW THE USE OF ANY ADDITIVES TO THE DRILLING MUD WITHOUT THE APPROVAL OF COMPANY INSPECTOR.
3. INSTALL SUITABLE DRILLING MUD TANKS OR SUMPS TO PREVENT CONTAMINATION OF WATERCOURSE.
4. INSTALL BERMS DOWNSLOPE FROM THE DRILL ENTRY AND ANTICIPATED EXIT POINTS TO CONTAIN ANY RELEASE OF DRILLING MUD.
5. DISPOSE OF DRILLING MUD IN ACCORDANCE WITH THE APPROPRIATE REGULATORY AUTHORITY REQUIREMENTS.
6. A SEDIMENT BARRIER SHALL BE PLACED ON THE DOWN SLOPE SIDE OF RIGHT-OF-WAY, PER THE PROJECT NARRATIVE.

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

PROFILE

NOTES:

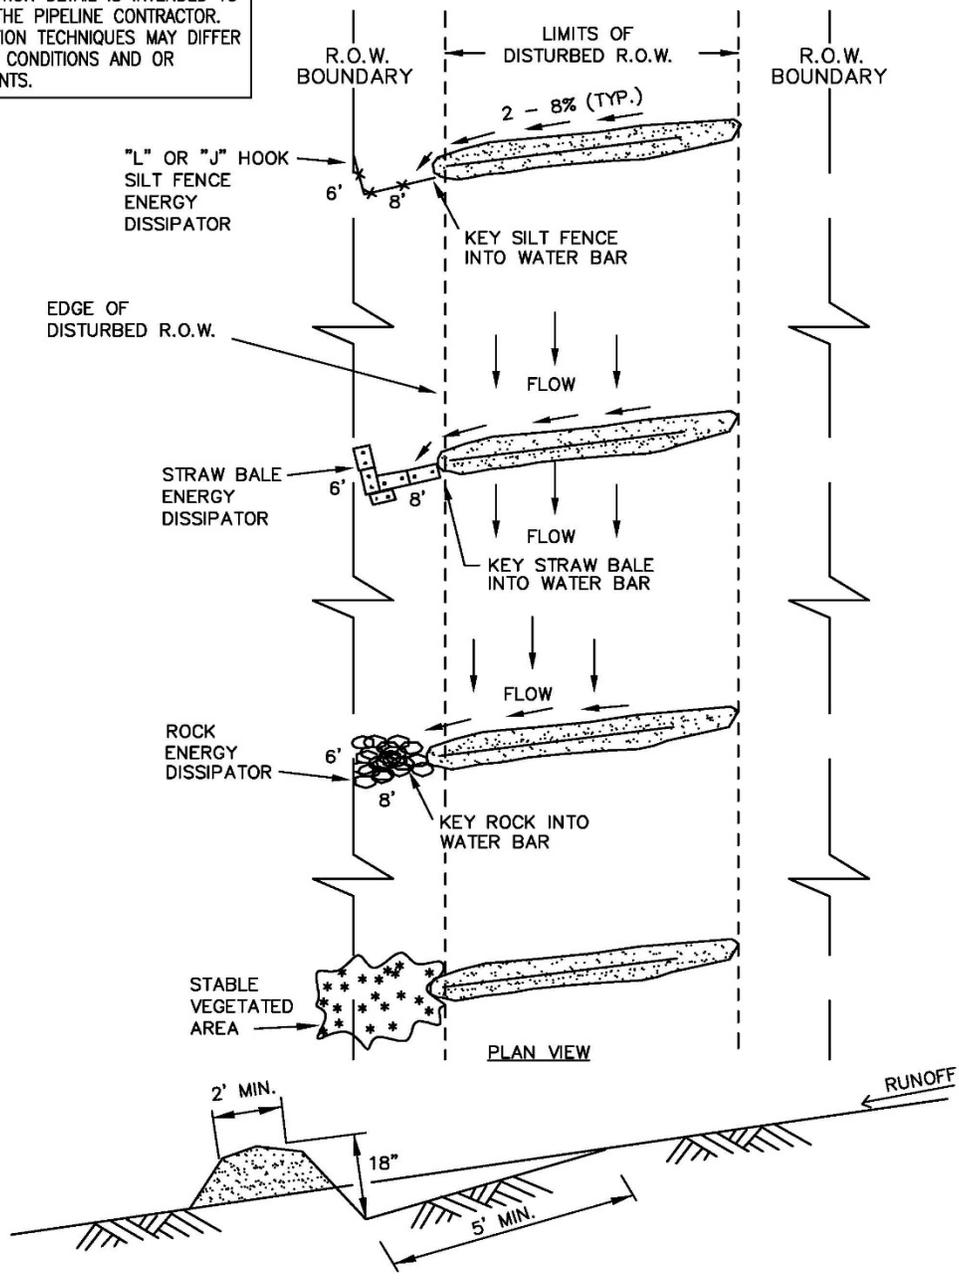

1. STRIP TOPSOIL FROM THE BELLHOLE AREA IN UNMANAGED WOODLAND. STRIP TOPSOIL FROM THE BELLHOLE AND SPOIL STORAGE AREA ON AGRICULTURAL LAND.
2. EXCAVATE BELLHOLE, STORING SPOIL ON OPPOSITE SIDE OF R.O.W. FROM TOPSOIL OR ADJACENT TO TOPSOIL MAINTAINING A MINIMUM 12 INCHES OF SEPARATION TO AVOID MIXING TOPSOIL AND SPOIL.
3. THE SIDES OF THE BORE PITS SHALL BE SLOPED BACK TO STABLE CONFIGURATION UNLESS SUPPORTED BY SHEET PILING OR OTHER SHORING MEANS. INSTALL SAFETY FENCE AROUND BORE PITS AS NECESSARY.
4. INSTALL TEMPORARY EROSION CONTROL PROCEDURES AS SPECIFIED IN THE APPROVED EROSION AND SEDIMENT CONTROL PLAN.
5. DEWATER BORE PIT TO CONTROL SEEPAGE WATER FLOW. DEWATER INTO AN APPROPRIATE DEWATERING STRUCTURE.
6. UPON COMPLETION OF PIPE INSTALLATION AND TIE-INS, BACKFILL PIT SPOIL. MINIMIZE POST CONSTRUCTION SETTLEMENT BY COMPACTING BACKFILL USING STANDARD PIPELINE CONSTRUCTION EQUIPMENT AVAILABLE AT SITE. LEAVE A CROWN TO ALLOW FOR SUBSIDENCE OF THE BACKFILL. RESPREAD SALVAGED TOPSOIL AND COMPACT.

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

NOTES:

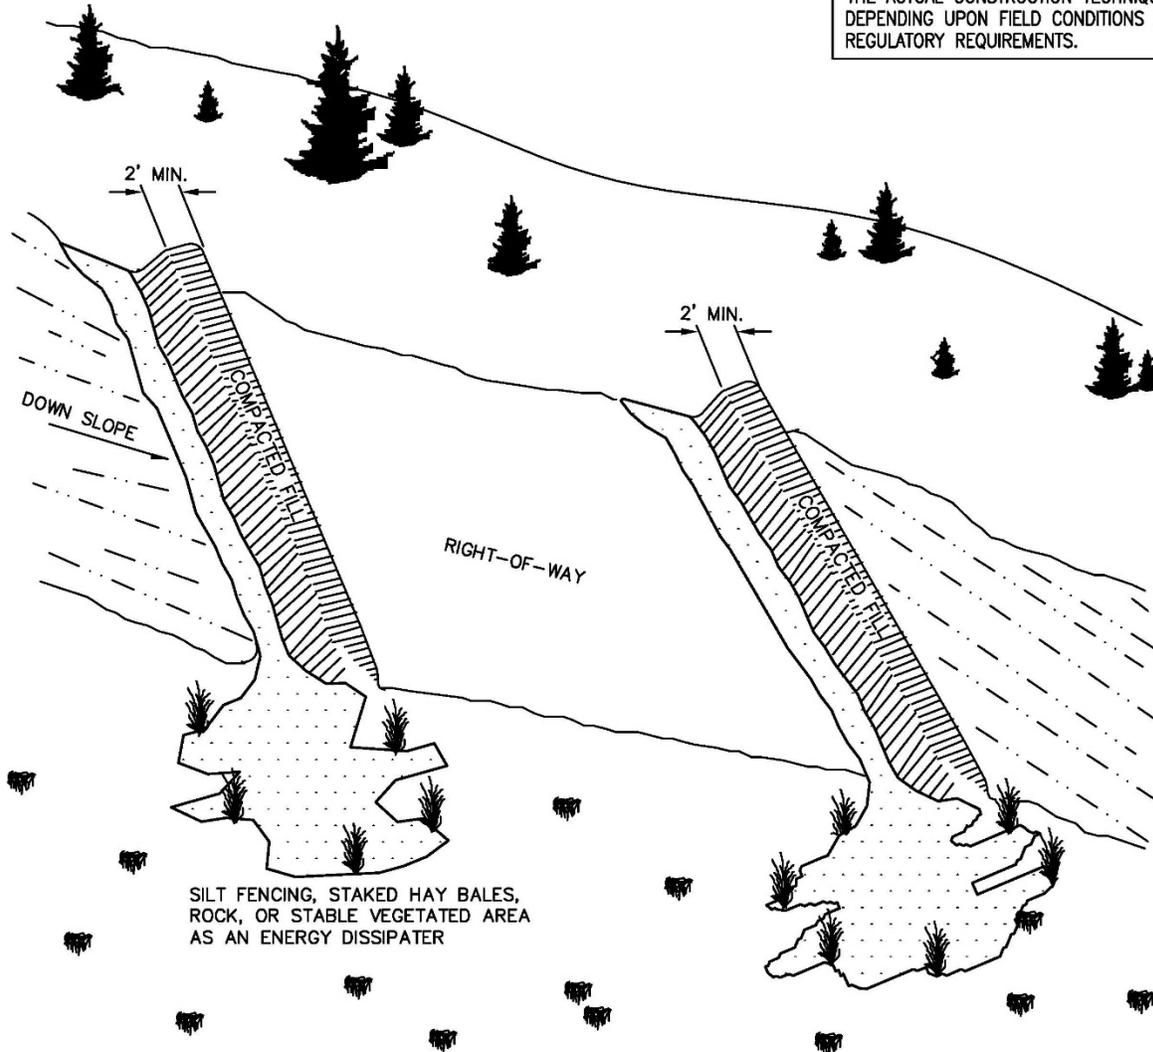

WATER BAR CROSS SECTION DETAIL

1. SLOPE BREAKERS SHALL BE CONSTRUCTED OF COMPACTED NATIVE SOIL AND INSTALLED AT LOCATIONS AS SHOWN ON THE CONSTRUCTION DRAWINGS OR AS DIRECTED BY THE COMPANY'S INSPECTOR.
2. SLOPE BREAKERS SHALL BE ORIENTED AS SHOWN OR OTHER PATTERN AS DIRECTED BY THE COMPANY'S INSPECTOR TO DIRECT THE WATER OFF THE R.O.W.
3. SLOPE BREAKERS SHALL BE CONSTRUCTED AT A 2-8% GRADIENT ACROSS THE SLOPE.
4. THE SLOPE BREAKERS SHALL BE 18" DEEP (AS MEASURED FROM THE TROUGH TO THE TOP OF THE SLOPE BREAKER). THE TROUGH WILL BE A MINIMUM OF 5' WIDE ACROSS THE WIDTH OF THE RIGHT-OF-WAY.

Source: Mountain Valley's FERC Application

Mountain Valley Project
 Water Bar
 Typical Slope Breaker
 (SB)

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

NOTES: (CONTINUED)

5. THE OUTLET OF THE SLOPE BREAKER MUST FREELY DISCHARGE ALL RUNOFF OFF THE DISTURBED RIGHT-OF-WAY INTO A STABLE, WELL VEGETATED AREA OR INTO AN ENERGY DISSIPATOR.
6. WHERE SLOPE BREAKERS EXTEND BEYOND THE EDGE OF THE CONSTRUCTION R.O.W. TO DIRECT RUNOFF INTO STABLE, WELL VEGETATED AREAS, THESE LOCATIONS MUST BE APPROVED BY THE COMPANY'S INSPECTOR.

FLOW ENERGY DISSIPATOR NOTES:

1. THE OUTLET SHALL CONTAIN AN ENERGY DISSIPATOR IF THE COMPANY'S INSPECTOR DETERMINES EXISTING VEGETATION IS NOT SUFFICIENTLY STABLE TO PREVENT EROSION. THE ENERGY DISSIPATOR SHALL BE CONSTRUCTED AS FOLLOWS:
 - OUTFALL END OF DISSIPATOR SHOULD BE LOWER THAN SLOPE BREAKER END.
 - SILT FENCE, STRAW BALE OR ROCK DISSIPATORS SHOULD BE KEYED INTO THE END OF THE SLOPE BREAKER.
 - PROVIDE ENOUGH AREA INSIDE "L" TO CAPTURE AND HOLD SEDIMENT.

C1-18
Mountain Valley Project
Water Bar
Typical Slope Breaker
(SB)

STRAW MULCH

1. STRAW MULCH SHALL BE INSTALLED AT LOCATIONS IDENTIFIED ON THE CONSTRUCTION DRAWING AND/OR AS DIRECTED BY THE COMPANY'S INSPECTOR TO PROTECT SOIL FROM EROSION. AREAS TARGETED FOR STRAW MULCH INCLUDE THE FOLLOWING:
 - 10-40% SLOPES WITH LESS THAN 40% SURFACE COVER.
 - 0-10% SLOPES WITH SOILS RATED BY APPLICABLE COUNTY AS HIGH IN WIND ERODIBILITY AND LESS THAN 40% SURFACE COVER AND IF DIRECTED BY COMPANY'S INSPECTOR.
2. WHEAT, OAT, BARLEY, RYE OR FLAX STRAW WILL BE USED, WHERE APPROPRIATE, DEPENDING UPON AVAILABILITY.
3. ONLY CERTIFIED "NOXIOUS WEED-FREE" STRAW MULCH SHALL BE APPLIED AT A RATE OF:
 - 1,780 TO 2,225 LB/AC WHEAT, OAT, BARLEY OR RYE STRAW
 - 2,670 TO 3,560 LB/AC FLAX STRAW
4. AREAS WHERE RESPREAD TOPSOIL EXHIBITS AN ADEQUATE COVER FROM RESPREAD OF PLANT DEBRIS AND COARSE FRAGMENTS, MULCH RATES MAY BE
REDUCED OR ELIMINATED BY THE COMPANY'S INSPECTOR.

STRAW CRIMPING

1. STRAW CRIMPING WILL BE UTILIZED ON NONCULTIVATED, WIND EROSION PRONE SOILS, AND ON CULTIVATED, WATER EROSION PRONE SOILS AS IDENTIFIED ON THE ALIGNMENT SHEETS, UNLESS OTHERWISE DIRECTED BY THE COMPANY'S INSPECTOR. STRAW CRIMPING AT ADDITIONAL LOCATIONS IDENTIFIED BY THE COMPANY'S INSPECTOR MAY BE REQUIRED.
2. EQUIPMENT SPECIFICALLY DESIGNED TO CRIMP STRAW (SUCH AS A STRAW MULCH CRIMPER MANUFACTURED BY FINN CORPORATION OR AN APPROVED EQUIVALENT) SHALL BE USED TO CRIMP STRAW FIBERS TO A DEPTH OF TWO TO THREE INCHES. STEEP SLOPES INACCESSIBLE WITH A CRIMPER SHALL BE CRIMPED BY TRACKING WITH A CRAWLER RUNNING PERPENDICULAR TO THE SLOPE. DISCS SHALL NOT BE ALLOWED FOR CRIMPING EXCEPT AS STATED IN NOTE 3.

WHERE EXCESSIVE STONINESS IS ENCOUNTERED TO THE EXTENT THAT THE SPECIALIZED CRIMPING EQUIPMENT IS NOT
USEABLE, ATTEMPT TO ANCHOR THE STRAW BY INCORPORATION WITH AN AGRICULTURAL DISC OR CULTIVATOR. WHERE
FROZEN GROUND CONDITIONS ARE ENCOUNTERED TO THE EXTENT THAT THE CRIMPING OPERATION IS NOT FEASIBLE,
SPREAD STRAW AT DOUBLE THE NORMAL RATE.

CRIMP OR ANCHOR STRAW INTO THE SOIL TO AN APPROXIMATE DEPTH OF 2". STRAW SHOULD STAND
VERTICALLY 2" TO 8" OUT OF THE GROUND IN ROWS SPACED APPROXIMATELY 6" APART.

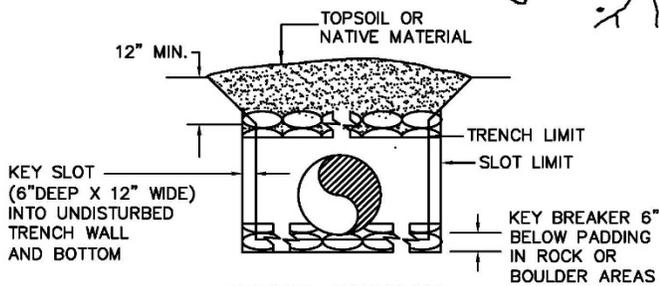

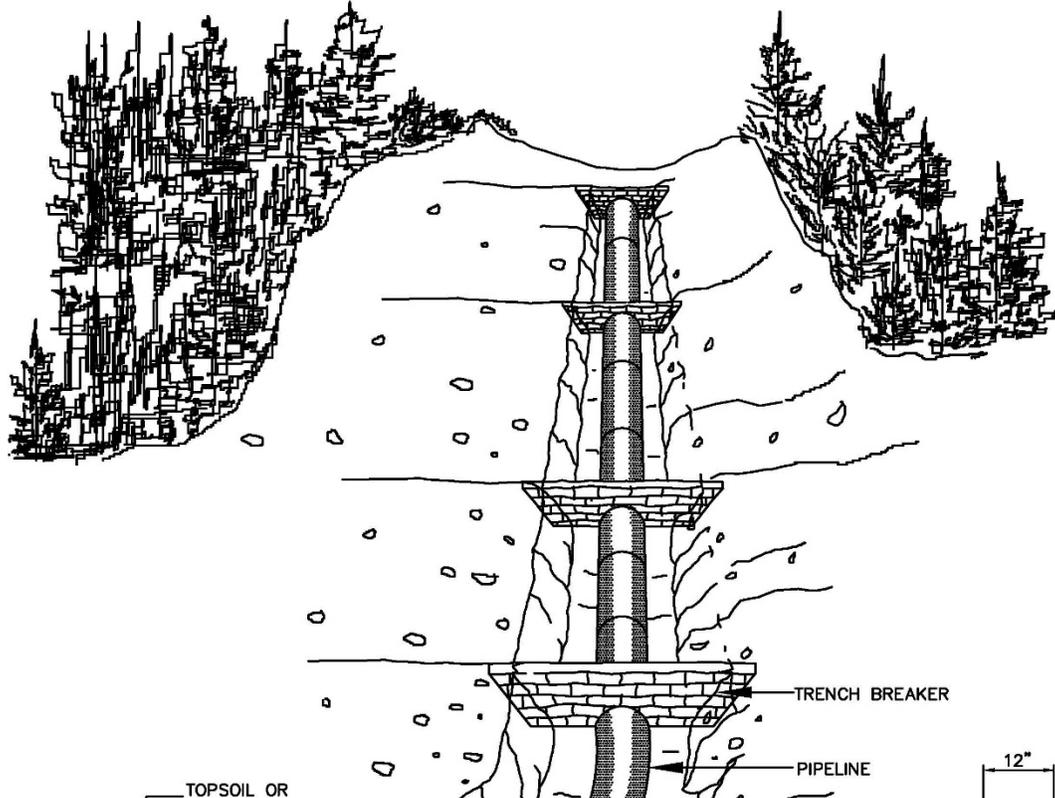

IN HIGHLY ERODIBLE SANDY LOCATIONS, WHERE DIRECTED BY THE COMPANY'S INSPECTOR, DOUBLE THE STRAW
APPLICATION RATE AND MAKE TWO PASSES TO ANCHOR THE STRAW, ONE PASS PERPENDICULAR TO THE OTHER
OR CRISS-CROSSED.
3. STRAW FOR CRIMPING WILL BE APPROVED BY COMPANY AND THE LANDOWNERS AND OCCUPANTS OR APPROPRIATE
REGULATORY AUTHORITIES WHERE APPLICABLE. CRITERIA FOR THE SELECTION OF STRAW IS AS FOLLOWS:
 - FOR EACH LOT OF BALES, TO THE EXTENT FEASIBLE, THE FIELD WHERE THE BALES WERE OBTAINED WILL BE INSPECTED BEFORE IT IS HARVESTED, OR THE STUBBLE WILL BE INSPECTED IMMEDIATELY AFTER HARVEST AND A SAMPLE OF GRAIN WILL BE INSPECTED FOR WEED SEEDS.
 - THE STRAW MUST HAVE BEEN HARVESTED WITH A CONVENTIONAL COMBINE, NOT A ROTARY COMBINE.
 - THE STRAW MUST HAVE A MINIMUM FIBRE LENGTH OF 8", 12" IS PREFERRED.
 - THE STRAW MUST BE FREE OF NOXIOUS OR RESTRICTED WEEDS AND UNDESIRABLE SPECIES WHICH WOULD HAMPER RECLAMATION EFFORTS.
 - TO THE EXTENT FEASIBLE, BALES OBTAINED FROM LOW LYING WEEDY AREAS WILL BE IDENTIFIED AND AVOIDED.

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

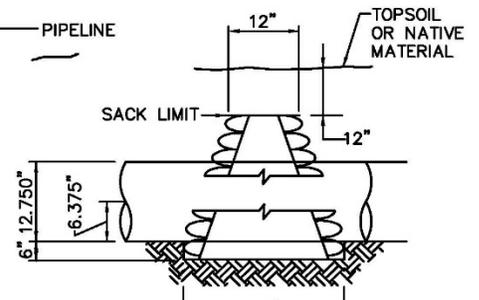

Source: Mountain Valley's FERC Application

SLOPE %	SPACING
0% - 5%	NOT REQUIRED EXCEPT AT STREAM OR WATER BODY CROSSINGS
5% - 15%	300 FT
> 15% - 30%	200 FT
>30%	100 FT

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

CROSS SECTION

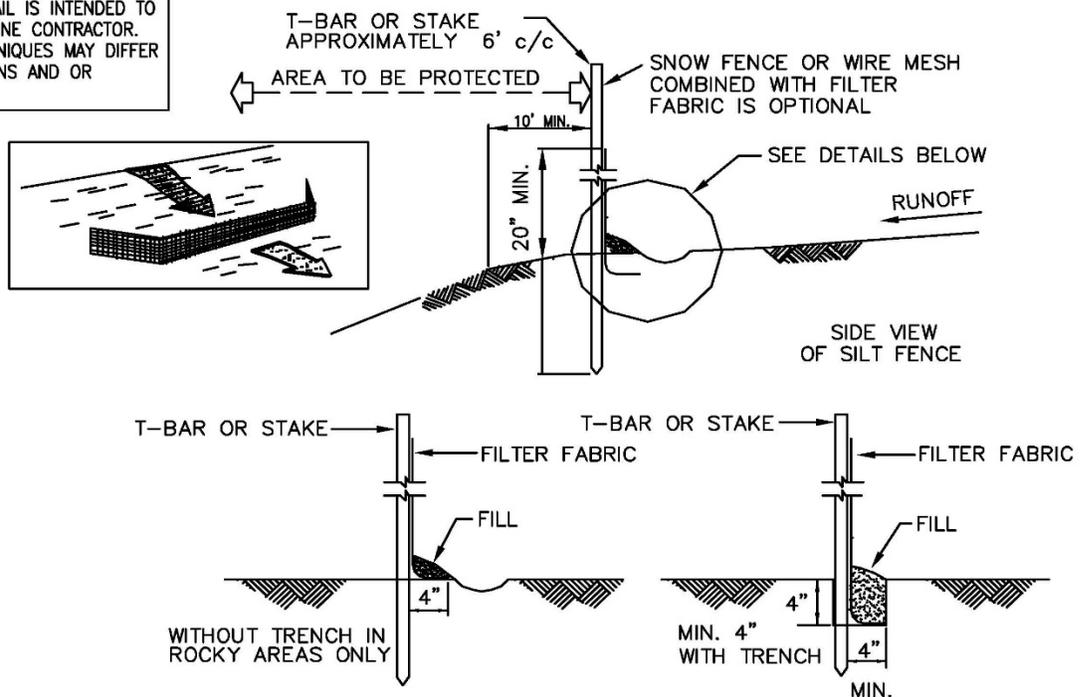

SIDE VIEW

NOTES

- TRENCH BREAKERS SHALL BE INSTALLED:
 - ON SLOPES ALONG THE TRENCH LINE WHERE THE NATURAL DRAINAGE PATTERN, PROFILE, AND TYPE OF BACKFILL MATERIAL MAY RESULT IN LOSS OF BACKFILL MATERIAL OR ALTERATION OF THE NATURAL PATTERN;
 - AT THE BASE OF SLOPES ADJACENT TO WATERBODIES AND WETLANDS;
 - WHERE NEEDED TO AVOID DRAINING A WETLAND;
 - ON UPLAND SLOPES, AT THE SAME SPACING AS SLOPE BREAKERS AND UP SLOPE OF SLOPE BREAKERS;
 - IN CULTIVATED LAND AND RESIDENTIAL AREAS WHERE PERMANENT SLOPE BREAKERS ARE NOT TYPICALLY INSTALLED, AT THE SAME SPACING AS IF PERMANENT SLOPE BREAKERS WERE REQUIRED.
- OPEN WEAVE HEMP OR JUTE SACKS SHALL BE FILLED WITH A MINIMUM OF 55lbs. MIXTURE OF 1 PART CEMENT TO 6 PARTS SAND OR SUBSOIL SO THAT NATURAL GROUND WATER WILL PERMIT MIXTURE TO EXUDE AND BOND SACKS TOGETHER.
- BREAKER SPACING AND CONFIGURATION MAY BE CHANGED AS DIRECTED BY COMPANY. DEPTH OF DITCH MAY VARY WITH SITE CONDITIONS.
- ALL MATERIALS SHALL BE SUPPLIED BY CONTRACTOR.

Source: Mountain Valley's FERC Application

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

NOTE:

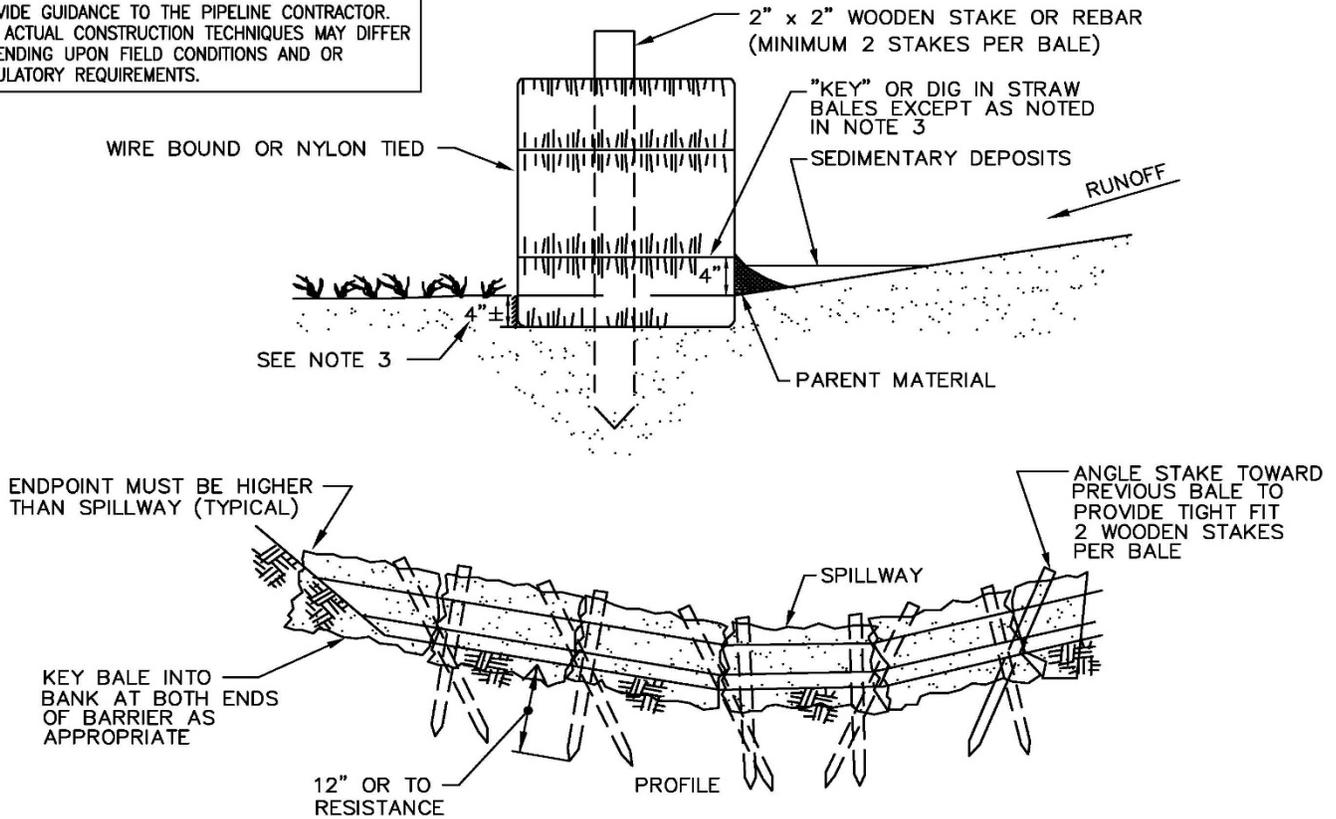

1. GENERALLY WHEN A LONG SEDIMENT BARRIER IS REQUIRED, SILT FENCE WILL BE UTILIZED RATHER THAN STRAW BALES AT:
 - THE BASE OF ALL SLOPES ABOVE ROADS, SPRINGS, WETLANDS, IMPOUNDMENTS AND PERENNIAL AND INTERMITTENT STREAMS.
 - THE DOWN SLOPE RIGHT-OF-WAY EDGE WHERE ANY OF THE ABOVE MENTIONED LOCATIONS ARE ADJACENT TO THE RIGHT-OF-WAY.
 - BETWEEN TOPSOIL/SPOIL STOCKPILES AND PERENNIAL OR INTERMITTENT STREAMS OR WETLANDS WHERE BUFFER ZONE REQUIREMENTS CANNOT BE MET.
 - ALONG R.O.W. BOUNDARIES OF WETLAND CONSTRUCTION.
 - AS SPECIFIED IN THE SPILL PREVENTION, CONTAINMENT, AND COUNTERMEASURE PLAN.
 - AS DIRECTED BY THE COMPANY'S INSPECTOR.

2. THE SILT FENCE SHALL BE CONSTRUCTED AS FOLLOWS:
 - FABRIC USED FOR THE SILT FENCE SHALL BE A "STANDARD STRENGTH" GEOTEXTILE, SUCH AS MIRAFI 100X OR AN APPROVED EQUIVALENT.
 - THE FABRIC SHALL BE CUT FROM A CONTINUOUS FABRIC ROLL.
 - THE HEIGHT OF THE FENCE SHALL NOT EXCEED 24".
 - SPLICES SHALL ONLY BE DONE AT POSTS AND SHALL CONSIST OF A MINIMUM OF 6" OF OVERLAP WITH BOTH ENDS SECURED TO THE POST.
 - POSTS SHALL BE POSITIONED A MAXIMUM OF 6' APART.
 - POSTS SHALL CONSIST OF 2"x2" WOODEN STAKES OF SUFFICIENT LENGTH TO EXTEND A MINIMUM OF 12" INTO THE GROUND.
 - FABRIC SHALL BE STAPLED OR WIRED TO POSTS A MAXIMUM OF EVERY 9".

3. THE SILT FENCE SHALL BE INSTALLED AS SPECIFIED BY THE MANUFACTURER OR AS FOLLOWS:
 - A TRENCH, 4" WIDE AND 4" DEEP, SHALL BE EXCAVATED ALONG THE CONTOUR. THE POST SHALL BE DRIVEN INTO THE BOTTOM OF THE TRENCH ON THE DOWNSTREAM SIDE OF THE FILTER FABRIC. THE TRENCH SHALL BE BACK FILLED AND COMPACTED, ENSURING 4" OF FENCE IS BURIED WITHIN THE TRENCH.
 - IN AREAS WHERE THE TERRAIN IS TOO ROCKY FOR TRENCHING, A 4" GROUND FLAP WITH ROCK FILL TO HOLD IT IN PLACE SHALL BE USED.

Source: Mountain Valley's FERC Application

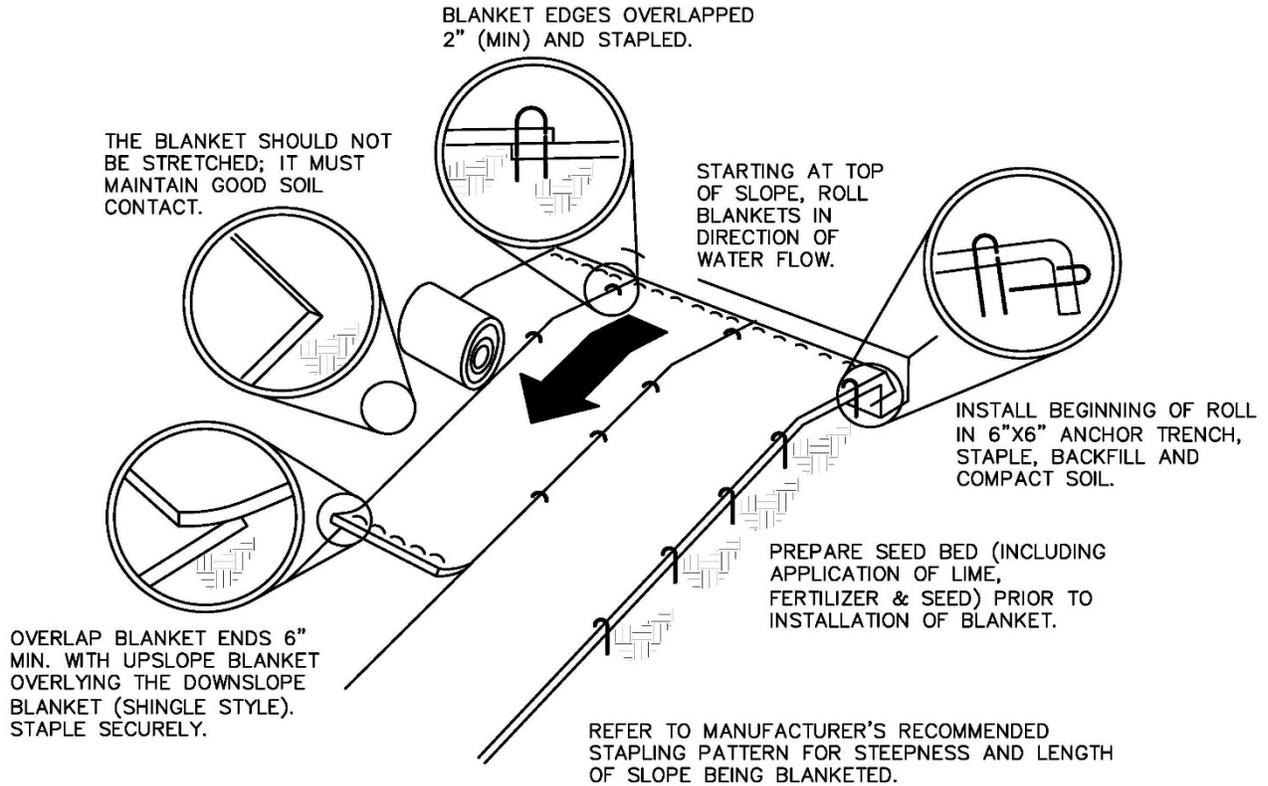

THIS TYPICAL CONSTRUCTION DETAIL IS INTENDED TO PROVIDE GUIDANCE TO THE PIPELINE CONTRACTOR. THE ACTUAL CONSTRUCTION TECHNIQUES MAY DIFFER DEPENDING UPON FIELD CONDITIONS AND OR REGULATORY REQUIREMENTS.

NOTES:

1. STRAW BALE SEDIMENT BARRIERS SHALL BE INSTALLED AT THE FOLLOWING LOCATIONS:
 - THE BASE OF ALL SLOPES ABOVE ROADS, SPRINGS, WETLANDS, IMPOUNDMENTS AND FLOWING STREAMS.
 - THE DOWNSLOPE RIGHT-OF-WAY EDGE WHERE ANY OF THE ABOVE-MENTIONED LOCATIONS ARE ADJACENT TO THE RIGHT-OF-WAY.
 - BETWEEN TOPSOIL/SPOIL STOCKPILES AND STREAMS OR WETLANDS AS NEEDED.
 - ALONG R.O.W. BOUNDARIES IN WETLAND CONSTRUCTION.
 - AS SPECIFIED IN THE SPILL PREVENTION, CONTAINMENT, AND COUNTERMEASURE PLAN.
 - AS DIRECTED BY THE COMPANY'S INSPECTOR.
2. STRAW BALE SEDIMENT BARRIERS SHALL CONSIST OF A ROW OF STRAW BALES, PLACED ON THE FIBER-CUT EDGE (TIES NOT IN CONTACT WITH THE GROUND). BALES SHALL BE TIGHTLY ABUTTED TO ONE ANOTHER. THE BARRIER SHALL BE ONE BALE HIGH. ONLY CERTIFIED "NOXIOUS WEED-FREE" STRAW SHALL BE USED WHENEVER POSSIBLE.
3. ENTRENCH ("KEY") STRAW BALES INTO THE GROUND TO A DEPTH OF 4" EXCEPT IN FROZEN, SATURATED, OR EXTREMELY ROCKY SOILS. PLACE PARENT MATERIAL ON UPSTREAM SIDE OF STRAW BALES TO PREVENT UNDERMINING.
4. WALK ON STRAW BALES TO INSURE ADEQUATE BALE-TO-SOIL CONTACT.
5. ANCHOR STRAW BALES SECURELY IN PLACE WITH TWO WOODEN OR STEEL REBAR STAKES DRIVEN THROUGH THE TOPS OF THE BALES. THE STAKES SHALL PENETRATE THE GROUND A DISTANCE OF 12" UNLESS ROCK OR AN IMPERMEABLE LAYER IS ENCOUNTERED:
 - THE FIRST, CENTER AND END BALES OF THE BARRIER SHALL HAVE STAKES DRIVEN VERTICALLY THROUGH THE BALE.
 - BALES, OTHER THAN THOSE LOCATED AT THE ENDS OR CENTER OF THE BARRIER, SHALL HAVE THE FIRST STAKE DRIVEN THROUGH THE TOP OF THE BALE AT AN ANGLE SO THAT THE STAKE PASSES THROUGH THE PREVIOUSLY PLACED BALE, IN ORDER TO PROVIDE TIGHT CONTACT BETWEEN BALES. THE SECOND STAKE SHALL BE DRIVEN VERTICALLY THROUGH THE TOP OF THE BALE.

Source: Mountain Valley's FERC Application

SEED AND SOIL AMENDMENTS SHALL BE APPLIED ACCORDING TO RATES IN THE PLAN DRAWINGS PRIOR TO INSTALLING THE BLANKET.

PROVIDE ANCHOR TRENCH AT TOE OF SLOPE IN SIMILAR FASHION AT THE TOP OF SLOPE.

SLOPE SURFACE SHALL BE FREE OF ROCKS, CLODS, STICKS AND GRASS.

BLANKET SHALL HAVE GOOD CONTINUOUS CONTACT AND UNDERLYING SOIL THROUGHOUT ENTIRE LENGTH. LAY BLANKET LOOSELY AND STAKE OR STAPLE TO MAINTAIN DIRECT CONTACT WITH SOIL. DO NOT STRETCH BLANKET.

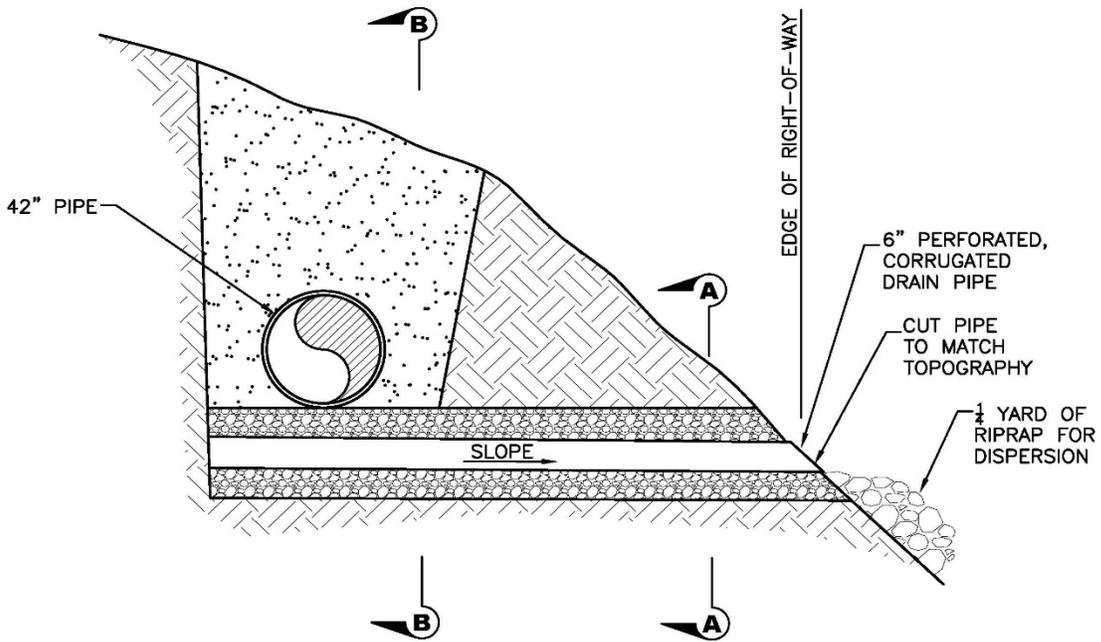

BLANKET SHALL BE STAPLED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.

BLANKET AREAS SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF EVENT UNTIL PERENNIAL VEGETATION IS ESTABLISHED TO A MINIMUM UNIFORM 70% COVERAGE THROUGHOUT THE BLANKETED AREA. DAMAGED OR DISPLACED BLANKETS SHALL BE RESTORED OR REPLACED WITHIN 4 CALENDAR DAYS.

MVP-ATWS-1321	297.3	Pittsylvania	Virginia	Material staging, which is anticipated to include, but not limited to, Sand Sacks, Sack Crete, Lumber Skids, Pipe Segments, Water Pumps, Rock-Shield, Timber Mats, Flume Pipe and Fittings, and additional vehicle/equipment parking if required.
MVP-ATWS-1320	297.3	Pittsylvania	Virginia	Material staging, which is anticipated to include, but not limited to, Sand Sacks, Sack Crete, Lumber Skids, Pipe Segments, Water Pumps, Rock-Shield, Timber Mats, Flume Pipe and Fittings, and additional vehicle/equipment parking if required.
MVP-ATWS-1322	298.6	Pittsylvania	Virginia	Material staging, which is anticipated to include, but not limited to, Sand Sacks, Sack Crete, Lumber Skids, Pipe Segments, Water Pumps, Rock-Shield, Timber Mats, Flume Pipe and Fittings, and additional vehicle/equipment parking if required.
MVP-ATWS-1323	298.7	Pittsylvania	Virginia	Material staging, which is anticipated to include, but not limited to, Sand Sacks, Sack Crete, Lumber Skids, Pipe Segments, Water Pumps, Rock-Shield, Timber Mats, Flume Pipe and Fittings, and additional vehicle/equipment parking if required.
MVP-ATWS-611	298.7	Pittsylvania	Virginia	Material staging, which is anticipated to include, but not limited to, Sand Sacks, Sack Crete, Lumber Skids, Pipe Segments, Water Pumps, Rock-Shield, Timber Mats, Flume Pipe and Fittings, and additional vehicle/equipment parking if required.
MVP-ATWS-401A	299.1	Pittsylvania	Virginia	Storage of excess spoil at crossings, Material staging, which is anticipated to include, but not limited to, Sand Sacks, Sack Crete, Lumber Skids, Pipe Segments, Water Pumps, Rock-Shield, Timber Mats, Flume Pipe and Fittings, and additional vehicle/equipment parking if required.
MVP-ATWS-401	299.1	Pittsylvania	Virginia	Storage of excess spoil at crossings, Material staging, which is anticipated to include, but not limited to, Sand Sacks, Sack Crete, Lumber Skids, Pipe Segments, Water Pumps, Rock-Shield, Timber Mats, Flume Pipe and Fittings, and additional vehicle/equipment parking if required.

APPENDIX D-4

Extra Workspaces Within 50 Feet of a Waterbody or Wetland

Equitrans Expansion Project

APPENDIX D-4

Additional Temporary Workspace within 50 Feet of Wetlands and Waterbodies for the Equitrans Expansion Project

Project Feature	MP	County	State	ATWS	ATWS Use	ATWS Length x Width <u>a/</u>	Wetland or Waterbody ID	Offset (feet)	Justification
Wetlands									
H-316	1.5	Greene	Pennsylvania	H316 ATWS 05	Laydown Area	2376' x 228'	W-AA8	0	ATWS is located in open field. Work Space to stage the pipe bending crew.
H-316	2.0	Greene	Pennsylvania	H316 ATWS 06	HDD Pullback	825' x 211'	W-AA9	0	Work will be done over timber mats to prevent compaction and rutting. Workspace needed for pipe stringing and pullback of the HDD section.
H-316	2.8-3.0	Greene	Pennsylvania	H316 ATWS 07	H-316 HDD Entrance Location/H-302 Hot Tap Location	Irregular Shape	W-M2,W-M3, W-M4, W-M5, W-M6	0 - 5	Work will be done over timber mats to prevent compaction and rutting. To allow adequate work space to construct the HDD activities, stage and conduct H-302 Hot Tap, and Launcher/Receiver.
H-318	2.8	Allegheny	Pennsylvania	H318 ATWS 05c	H-318 HDD Entrance Location	Irregular Shape	W-BB13	10	No impacts to wetlands are anticipated. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter. HDD Entrance Area. To allow adequate work space to construct the HDD activities and groundbed installation.
									No impacts to wetlands are anticipated. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter.

APPENDIX D-4 (continued)									
Additional Temporary Workspace within 50 Feet of Wetlands and Waterbodies for the Equitrans Expansion Project									
Project Feature	MP	County	State	ATWS	ATWS Use	ATWS Length x Width <u>a/</u>	Wetland or Waterbody ID	Offset (feet)	Justification
H-319	0.0	Wetzel	West Virginia	H319 ATWS 01	Laydown Area	Irregular Shape	W-Z3A	11	To allow adequate space to stage materials and equipment for pipeline construction as well as maintain a buffer to S-A2A. The workspace is located in open field and limits tree disturbance.
H-319	0.0	Wetzel	West Virginia	H319 ATWS 02	Hot Tap Workspace	Irregular Shape	W-Z3B	0	Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter. To allow adequate work space to construct the Hot Tap as well as maintain a buffer to S-A2A. Work will be done over timber mats to prevent compaction and rutting.
Redhook	N/A	Greene	Pennsylvania	Redhook ATWS 01	Laydown Area	Irregular Shape	W-AA1	5	To allow adequate space to stage materials and equipment for compressor station construction. Equitrans owns this workspace, previously used as yard in other Equitrans projects.
Webster	N/A	Wetzel	West Virginia	Webster ATWS 01	Additional Workspace	625' x 82'	W-Z2	0	No impact to the wetland will occur. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter. To allow adequate space to stage materials and equipment for work at the Webster Interconnect. Workspace is limited to the open area to avoid impacts on trees. Work will be done over timber mats to prevent compaction and rutting.

APPENDIX D-4 (continued)

Additional Temporary Workspace within 50 Feet of Wetlands and Waterbodies for the Equitrans Expansion Project

Project Feature	MP	County	State	ATWS	ATWS Use	ATWS Length x Width <u>a/</u>	Wetland or Waterbody ID	Offset (feet)	Justification
Waterbodies									
H-158/M-80	0.1	Greene	Pennsylvania	H-158/M-80 ATWS 01	Temporary Storage Area	Irregular Shape	S-AA1	0	<p>Workspace is needed to allow adequate turning radius for equipment and material delivery.</p> <p>Stream impacts will be avoided by construction. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter; and any crossing of the stream will be done by timberman bridge.</p>
H-158/M-80	0.1	Greene	Pennsylvania	H-158/M-80 ATWS 02	Temporary Storage Area	Irregular Shape	S-AA1	10	<p>Workspace is needed for pipe bending and staging area. Equitrans owns this workspace, previously used in other Equitrans projects.</p> <p>Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter.</p>
H-305	0.1	Greene	Pennsylvania	H305 ATWS 01	Laydown Area	Irregular Shape	SN-1	0	<p>Work Space to tie into existing station.</p> <p>Stream impacts will be avoided by construction. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter.</p>
H-316	2.8-3.0	Greene	Pennsylvania	H316 ATWS 07	H-316 HDD Entrance Location/H-302 Hot Tap Location	Irregular Shape	S-M1	2.4	<p>To allow adequate work space to construct the HDD activities, stage and conduct H-302 Hot Tap, and Launcher/Receiver.</p> <p>Stream impacts will be avoided by construction. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter.</p>

APPENDIX D-4 (continued)									
Additional Temporary Workspace within 50 Feet of Wetlands and Waterbodies for the Equitrans Expansion Project									
Project Feature	MP	County	State	ATWS	ATWS Use	ATWS Length x Width <u>a/</u>	Wetland or Waterbody ID	Offset (feet)	Justification
H-318	1.7	Allegheny	Pennsylvania	H318 ATWS 02a, c, d	Additional Workspace	2a: 530' x 120' 2c: 130' x 50' 2d: 50' x 50'	S-BB3	10	Work Space to install the pipeline, and mitigate any slide issues if they would arise. Adequate workspace to conduct the dam and pump is limited by topography and adjacent roadways. Stream impacts within the ATWS will be avoided by construction. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter.
H-318	2.7	Allegheny	Pennsylvania	H318 ATWS 05a	Laydown Area	Irregular Shape	S-BB4	0	Workspace needed to conduct conventional road bore of Bunola River Road and sufficient workspace to conduct the dam and pump. Sediment barriers such as silt fence or compost filter sock will be installed around its south perimeter.
H-318	2.8	Allegheny	Pennsylvania	H318 ATWS 05c	H-318 HDD Entrance Location	Irregular Shape	S-BB4, S-BB6	0	HDD Entrance Area. To allow adequate work space to construct the HDD activities and groundbed installation. ATWS placement is constrained by Bunola River Road, adjacent Railroad, and topography to the south. No impacts to streams are anticipated with the exception of installation of the groundbed. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter, and any crossing will be made with a timber mat bridge.

APPENDIX D-4 (continued)

Additional Temporary Workspace within 50 Feet of Wetlands and Waterbodies for the Equitrans Expansion Project

Project Feature	MP	County	State	ATWS	ATWS Use	ATWS Length x Width <u>a/</u>	Wetland or Waterbody ID	Offset (feet)	Justification
Redhook	N/A	Greene	Pennsylvania	Redhook ATWS 01	Laydown Area	Irregular Shape	S-AA1	10	To allow adequate space to stage materials and equipment for compressor station construction. Equitrans owns this workspace, previously used as yard in other Equitrans projects. No impact to the stream will occur. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter.
Webster	N/A	Wetzel	West Virginia	Webster ATWS 01	Additional Workspace	625' x 82'	S-A2A, S-A3A	0	To allow adequate space to stage materials and equipment for work at the Webster Interconnect. Workspace is limited to the open area to avoid impacts on trees. Work will be done over timber mats to prevent compaction and rutting. Sediment barriers such as silt fence or compost filter sock will be installed around its perimeter.

a/ Length and width estimates are approximate; no dimensions are provided if ATWS would be irregularly shaped.

a/ All waterbodies will be open-cut dry with the exception of the Elk River (MP 87.4), Gauley River (MP 118.6), and Greenbrier River (MP 170.6) which will be open-cut wet ditch.

b/ Flow Regime:
DD = Dry Ditch, Eph = Ephemeral, Int = Intermittent; Per = Perennial

c/ From Federal Register / Vol. 80, No. 124 / Monday, June 29, 2015 / Rule Ephemeral streams (rain-dependent streams) have flowing water only in response to precipitation events in a typical year, and are always above the water table Intermittent streams (seasonal streams) are those that have both precipitation and groundwater providing part of the stream's flow, and flow continuously only during certain times of the year (e.g., during certain seasons such as the rainy season
UNT = Unnamed Tributary, RPW = Relatively Perm. Waters, NRPW = Non-Relatively Perm. Waters, TNW = Traditional Navigable Waters, ISO = Isolated

d/ Crossing Method:
OCDD = Open-Cut Dry Ditch, OCWD = Open-Cut Wet Ditch

e/ West Virginia State Water Classifications: (Source: WVDEP)
A = Public water
B = Propagation and Maintenance of fish and other aquatic life includes: warm water fishery, trout waters, and wetland
C = Water Contact Recreation
D = Irrigation, Wildlife, Livestock watering
E = Water transport, Cooling water, Power production, Industrial

f/ Virginia State Water Classifications: (Source: VDEQ)
AL = Propagation and Maintenance of fish and other aquatic life
FC = Production of edible and marketable natural resources including fish and shellfish
R = Water Contact Recreation, including swimming and boating
W = Wildlife
PWS = Public Water Supply
No data = This stream has not been accessed by the VDEQ and there is no data

g/ Fishery Type: (Sources: WVDNR and VDGIF as listed in RR3)
M = Mussel Stream
B2 = Trout Waters (WV only)
CW = Coldwater Stream
WW = Warmwater Stream
TE = Threatened and Endangered Species Stream WT = Wild Trout Stream (VA only)
ST = Stocked Trout Steam (VA only)

APPENDIX F-1 (continued)

Notes:

UNT – Unnamed Tributary, N/A - Not Applicable

a/ All waterbody IDs beginning with "S" are surveyed waterbodies.

b/ From Federal Register / Vol. 80, No. 124 / Monday, June 29, 2015 / Rules

Eph streams (rain-dependent streams) have flowing water only in response to precipitation events in a typical year, and are always above the water table.

Int streams (seasonal streams) are those that have both precipitation and groundwater providing part of the stream's flow, and flow continuously only during certain times of the year (e.g., during certain seasons such as the rainy season).

c/ Pennsylvania Protected and State Water Uses: (Source: 25 Pa. Code 93)

WWF = Warm Water Fishes

d/ West Virginia State Water Classifications: (Source: W.Va. Code 47CSR2)

B = Propagation and Maintenance of fish and other aquatic life

e/ Fishery Type: (Source: WVDEP, WWVDNR, and PADEP)

WW = Warmwater

f/ TOYR - Time of Year Restriction = Any span of time within time-of-year restrictions set forth by U.S. Army Corps of Engineer's 401 Water Quality Certification for streams crossed in WV and Greene County Conservation District (No date a, b)

NR = No Restriction

APPENDIX F-2 (continued)																		
Waterbodies Crossed by the Equitrans Expansion Project a/																		
Project Feature	Waterbody ID	Milepost	Waterbody Name	Flow Type b/	Impact Type n/	Impact Description	ATWS / Access Road ID	Length of Crossing (feet) h/	Perm. Impacts (Acres)	Temporary Impacts (Acres)	Crossing Method j/	FERC Classification	Waterbody Width (Feet) k/	Water Use c/, d/	Fishery Type e/	TOYR f/	Class of Pipe	Depth of Cover (Feet)
<u>g/</u>	River crosses county line																	
<u>h/</u>	Length of crossing is for linear feature (pipeline or access road) crossing length, which is different than the waterbody width if the crossing is not exactly perpendicular to the waterbody.																	
<u>i/</u>	The HDD crossing for South Fork Tenmile Creek also crosses the unnamed tributaries in the same bore.																	
<u>j/</u>	Open-cut dry crossing methods will either be dam and pump or flume.																	
<u>k/</u>	Waterbody width was measured in the field in the center of the survey area (not exactly at the pipeline crossing) and represents the bank full width (not the water width at the time of the survey).																	
<u>l/</u>	Pipeline crossing length is greater than top of bank width due to not crossing perpendicular to the waterbody.																	
<u>m/</u>	Pipeline crossing length is greater than top of bank width due to the pipeline crossing the stream more than once because of the meandering or branched nature of the waterbody.																	
<u>n/</u>	Route Ctl = Route Centerline; Access Ctl = Access Road Centerline.

APPENDIX F-5 (continued)

Fisheries of Special Concern Crossed by the Mountain Valley Project

Facility	Waterbody	MP	County	Fishery Type/ Issue <u>a/</u>	Species <u>b/</u>	Crossing Method	Restricted In-stream Construction Window <u>c/</u>
Access Road	UNT to Sinking Creek	213.6	Giles, VA	CW, WT		Open-Cut Dry	October 1 – June 30
Pipeline	UNT to Sinking Creek	215.2	Giles, VA	CW, WT		Open-Cut Dry	October 1 – June 30
Pipeline	UNT to Sinking Creek	215.3	Giles, VA	CW, WT		Open-Cut Dry	October 1 – June 30
Pipeline	UNT to Sinking Creek	215.2	Giles, VA	CW, WT		Open-Cut Dry	October 1 – June 30
Pipeline	UNT to Sinking Creek	216.3	Craig, VA	CW, WT		Open-Cut Dry	October 1 – June 30
Pipeline	Craig Creek	218.6	Montgomery, VA	CW, M, TE	James spiny mussel, Atlantic pigtoe, orangefin madtom	Open-Cut Dry	March 1 – July 31
Pipeline	Mill Creek	224.0	Montgomery, VA	CW, M, WT	Yellow lampmussel	Open-Cut Dry	August 15 – September 30
Pipeline	North Fork Roanoke River	225.8	Montgomery, VA	CW, TE, WT	Roanoke logperch	Open-Cut Dry	October 1 – June 30
Access Road	North Fork Roanoke River	225.8	Montgomery, VA	CW, TE, WT	Roanoke logperch	Open-Cut Dry	October 1 – June 30
Pipeline	Roanoke River	233.8	Montgomery, VA	WW, TE	Roanoke logperch, Orangefin madtom	Open-Cut Dry	March 15 – July 15
Pipeline	Bottom Creek	240.4	Roanoke, VA	CW, WT		Open-Cut Dry	October 1 – June 30
Pipeline	Mill Creek	242.9	Roanoke, VA	CW, WT, TE,	Orangefin madtom	Open-Cut Dry	October 1 – June 30
Pipeline	North Fork Blackwater River	247.3	Franklin, VA	CW, WT		Open-Cut Dry	October 1 – June 30
Pipeline	Pigg River	286.3	Franklin, VA	CW, TE	Roanoke logperch, Yellow lampmussel	Open-Cut Dry	March 1 – June 30; August 15 – September 30

MVP PIPELINE PROJECT
PROPOSED H600 PIPELINE
FRANKLIN COUNTY, VIRGINIA

APPENDIX I

Minor Route Variation Requests Reported by Stakeholders That Have Been Resolved

APPENDIX I

Minor Route Variation Requests Reported by Stakeholders That Have Been Resolved

FERC ID / Accession Number	Parcel Number	MP	Summary of Issues	Mountain Valley's Response / Current Status
20151125-5166	WV-HA-3906 (AR HA-18), WV HA-003, WV HA-005	9.70, 9.91, 9.98	Landowner concerned about proximity to house and driveway access to house.	Mountain Valley had previously stated it was continuing to evaluate alternative pipeline routes to increase the distance to the house and is continuing to coordinate with the landowner on the use of the access road for temporary construction access. In its EIR response dated July 18, 2016, Mountain Valley indicated that "potential impacts to resources on this property have been resolved."
20151016-0056	MVP-ATWS-779	35.9	Landowner requested a re-route to avoid construction equipment using a single lane dirt road that the landowner uses to access farm.	The temporary workspace originally proposed on this landowner's property has been removed.
20151116-0091	MVP- ATWS-779	35.9	Landowner concerned about use of road to house and road not being suitable for heavy equipment.	The temporary workspace originally proposed on this landowner's property has been removed.
20151120-0011	MVP- ATWS-779	35.9	Landowner concerned about use of road to house and road not being suitable for heavy equipment.	The temporary workspace originally proposed on this landowner's property has been removed.
20150420-5197	MVP-ATWS-310	169.8	Landowner requested a re-route to avoid impacts to a recreational fishing stream and proximity to a school.	The additional temporary workspace on this landowner's property has been removed.
20160127-0019	VA-GI-200.044, 200.045	215.5	Landowner requested a re-route to minimize splitting the property in two by the proposed pipeline route and minimizing impacts to springs on the property.	The proposed alignment has been modified to reduce impacts to residences and to avoid karst features on the property.
20150901-5075	VA-MO-019	234.8	Landowner requested a re-route to minimize impacts associated with the proposed compressor station location and forested land on property.	The pipeline location has been relocated 1,600 feet from the residence and the compressor station at this location is no longer being pursued.

APPENDIX I (continued)

Minor Route Variation Requests Reported by Stakeholders That Have Been Resolved

FERC ID / Accession Number	Parcel Number	MP	Summary of Issues	Mountain Valley's Response / Current Status
20150420-5280	VA-MO-019	234.8	Landowner requested a re-route to place the pipeline route further from the residence and to minimize impacts to the water supply.	The pipeline route has been modified to adopt the landowner's suggested route on the side of this property.
20150224-5187	VA-RO-048	241.2	Landowner requested a re-route to avoid impacts to farmland.	This comment relates to an alternative pipeline route that is no longer being evaluated. The property is not located on the proposed pipeline route.
20150612-0012	VA-PI-055	292.4	Landowner concerned about pipeline route impacts to water resources, geology, and cultural resources on property.	The pipeline route has been modified to avoid this property.
20150604-0050	VA-PI-055	292.45	Landowner requested a re-route to avoid Cherry Creek on the property due to concerns about impacts associated with sedimentation during construction.	The pipeline route has been modified to avoid this property.
20150109-0015	VA-PI-075, VA-PI-076	295.2	Landowner requested a re-route to avoid impacts on cultural resources, a cemetery, and sedimentation of Cherry Stone headwaters.	The pipeline route has been modified to reduce impacts to landowner's property and move the route further from the cemetery and the creek headwaters.

APPENDIX L

Karst Features

APPENDIX L

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
172.4	None	Sinkhole	Yes	Sinkhole mapped approximately 300 feet to right (Southwest).	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Summers
172.5	None	Sinkhole	Yes	Sinkhole approximately 650 feet left (Northeast). Proposed MVP crosses surface drainage leading to sinkhole.	Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	See Notes 3,4 at bottom of this table.	Summers
172.8	Moderate	Sinkhole	Yes	Sinkhole approximately 400 feet right (Southwest). Proposed MVP crosses surface drainage leading to sinkhole.	Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	See Notes 3,4 at bottom of this table.	Summers
172.8	Moderate	Spring	Yes	Small spring approximately 260 feet right (west). Proposed MVP crosses surface drainage leading to sinkhole.	Construction run-off and fluid discharge may impact spring.	See Notes 2 at bottom of this table.	Summers
172.9	None	Sinkhole	Yes	Compound sinkhole approximately 500 feet right (southwest) of the proposed alignment.	Sinkhole is upstream of the proposed alignment.	See Notes 3,4 at bottom of this table.	Summers
173.1	Minor	Sinkhole	Yes	Sinkhole mapped by desktop review approximately 100 feet to left (east) of proposed MVP alignment. Proposed alignment crosses watershed associated with the sinkhole, and crosses a topographic drainage leading to the south.	Construction across or in near vicinity of sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trench location to right (west) as needed (1's to 10's of feet) to avoid direct encounter with sinkhole. Implement construction ESC to prevent run-off into the sinkhole. Ensure that construction ESC prevents run-off to south along topographic drainage.	Summers

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
190.9	None	Losing Stream, Insurgence	Yes	Below the pond there is an area where a very small stream sinks into the ground. Elevation is about 30 feet above creek base level.	Construction run-off and fluid discharge may impact sinking stream and groundwater.	See Note 3 at bottom of this table.	Monroe
191.1	None	Springs (2)	Yes	440 feet Left, and 105 feet SW of Access Road MVP-MO-230, is a small wet weather seep. 705 feet Left, and 370 feet SW of Access Road MVP-MO-230, is a spring.	n/a	n/a	Monroe
194.2	Minor	Sinkhole	No	Sinkhole mapped by desktop review approximately 100 feet to right (east) of the proposed alignment. Proposed alignment crosses watershed associated with the sinkhole. Other small sinkholes are located approximately 150 feet to the right (Northeast).	Construction across or in near vicinity of sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater. Sinkhole may have a hydraulic connection to near-by Bobcat Cave or Rich Creek Cave/Spring.	Current alignment as mapped will not directly encounter sinkhole. If needed, adjust construction trench in the field left (east) as needed to avoid direct encounter with sinkhole. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s).	Monroe
194.4	None	Sinkhole	No	Sinkholes mapped by desktop review more than approximately 800 feet right (West) of alignment.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Monroe

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
194.4	None	Sinkhole and Cave	No	Bobcat Cave, described as a small room located in a large sinkhole, location uncertain, to right (west). Mapped by desktop review.	Construction across or in near vicinity of an open throat sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater. Sinkhole may have a hydraulic connection to near-by Bobcat Cave or Rich Creek Cave/Spring.	Adjust construction trench location as needed based on field observations to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s).	Monroe
194.6	Moderate	Spring and Cave	No	Rich Creek Spring (headwaters of Rich Creek, water supply for Red Sulphur PSD and Town of Peterstown, WV), Rich Creek Cave, and Rich Creek Fish Hatchery were mapped approximately 1,500 feet right (west) of the proposed alignment. The proposed alignment is at a higher elevation than the spring which distances it from potential impact. However, the presence of sinking streams and open throat sinkholes could provide direct conduit to the subsurface flow. Rich Creek Spring is large, serves a fish hatchery, headwater of Rich Creek which is back up water supply for Peterstown.	The primary concern is potential impact on water resources. Construction and maintenance may impact Rich Creek Cave and Spring, and the downstream surface water body Rich Creek.	As noted earlier, do not discharge fluids to ground. Ensure construction ESC prevents migration of sediment and fluids from the construction footprint. Refer to Note 2 at end of this table for baseline water quality testing recommendations for Rich Creek and Red Sulphur PSD.	Monroe

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
194.5	Minor	Sinkhole	No	Open throat sinkhole located approximately 600 feet (right) west of the proposed alignment.	These sinkholes are upstream of the MVP alignment.	See Notes 2, 4,5 at bottom of this table.	Monroe
194.6	Minor	Sinkhole	No	Sinkhole located approximately 80 feet left (east) of the proposed alignment.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observations to avoid direct encounter with sinkhole. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s).	Monroe
194.6	Minor	Sinkhole	No	Several sinkholes mapped by desktop review approximately 300 feet to the right (west) of the proposed alignment.	These sinkholes are upstream of the MVP alignment.	See Notes 2, 4,5 at bottom of this table.	Monroe
199.3	None	Sinkhole	No	Sinkholes mapped greater than 1,000 feet left (Northeast) of alignment.	Construction run-off and fluid discharge may impact sinkholes.	See Notes 3,4 at bottom of this table.	Giles
199.9	None	Lhoist Cave	Yes	Lhoist Cave is located approximately 370 feet right (southwest) of the proposed alignment.	Construction run-off and fluid discharge may impact cave.	See Notes 3,4 at bottom of this table.	Giles
200.1	None	Several sinkholes	Yes	Several sinkholes mapped by desktop review to left (northeast) of proposed alignment from approximately 400 to 1,000 feet.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
200.5	None	Sinkhole complex	Yes	Sinkhole complex approximately 1,000 feet right (southwest) and on the other side of a topographic high from the proposed alignment. Spring and swallet associated with sinkhole.	Due to distance and intervening ridge no impact is anticipated.	See Notes 2, 4,5 at bottom of this table.	Giles
200.8	Moderate	Sinkholes	Yes	Sinkholes observed within 150 feet left and right of proposed MVP alignment. Current alignment would need to be adjusted to avoid sinkholes. Another cluster of sinkholes further to the right (southwest) prevents avoidance of sinkholes altogether.	Current alignment traverses between two (2) sinkholes. Construction across or in near vicinity of sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	If avoidance by minor adjustment of the construction trench is not feasible to avoid sinkhole, see notes at end of this table for sinkhole stabilization recommendation. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s).	Giles
200.9	Minor	Karst	Yes	Exposed bedrock, heavy benches, shallow to no overburden cover, very epi-karst like. Rainwater percolates into bedrock with little surface flow. This observation is characteristic of the relatively near vicinity of the proposed alignment and not limited to the specific mile post.	A thin overburden mantle to shallow bedrock presents risk for rapid infiltration of construction-related or operations-related fluid to the subsurface.	As noted, do not discharge fluids to ground. Ensure that construction ESC prevents migration of sediment and fluids from the construction footprint. See Note 2 at end of this table for baseline water quality testing plan.	Giles
201.1	Minor	Possible Cave	Yes	A small natural opening is within 50 feet left (northeast) of alignment.	Construction run-off and fluid discharge may impact cave (assuming it is a cave).	See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
201.2	None	Cave	Yes	Crooks Crevice, 50-foot pit along roadside approximately 800 feet right (southwest) of proposed alignment.	Construction run-off and fluid discharge may impact cave.	See Notes 3,4 at bottom of this table.	Giles
202.6	None	Note	Yes	No karst-related features were mapped by desktop review or identified through field confirmation from MP 201.5 to 202.6 (Sheet 11 of 37).	n/a	n/a	Giles
203.2	None	Spring	No	Little Stoney Spring is located approximately 1,000 feet right (west) of proposed MVP alignment.	Construction run-off and fluid discharge may impact Little Stoney Spring located topographically below the proposed alignment.	Ensure construction ESC measures are in-place particularly in drainage toward Little Stoney Spring. See Note 2 at bottom of this table.	Giles
203.9	Moderate	Cave	Yes	Cave (Williams Contact Shaft) entrance approximately 140 feet right (west). In addition, a potential new cave called Mahaffey Trash Cave, a trash-filled entrance, was also observed approximately 800 feet right (west).	Construction across or in the near vicinity of a cave may lead to impacts on that natural resource, and long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact the cave, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the cave. If needed, adjust construction trench in the field left (east) as required to avoid direct encounter with cave. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the cave and surface drainage(s).	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
204.1	Moderate	Cave	Yes	High Voltage Cave is located approximately 150 feet left (east), in APCO high voltage electric transmission easement clearing. Though survey flags were to the east of the electric line. The area particularly to the west of the electric line has large bedrock benches and pinnacles.	Construction across or in the near vicinity of a cave may lead to impacts on that natural resource, and long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact the cave, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the cave. If needed, adjust construction trench in the field left (east) as required to avoid direct encounter with cave. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the cave and surface drainage(s).	Giles
204.2	None	Karst	Yes	Exposed bedrock, heavy benches, thin overburden mantle. This observation is characteristic of the relatively near vicinity of the proposed alignment and not limited to the specific mile post.	A thin overburden mantle to shallow bedrock presents risk for rapid infiltration of construction-related or operations-related fluid to the subsurface.	Ensure that construction ESC prevents migration of sediment and fluids from the construction footprint. Refer to Note 2 at end of this table for water resources for pre-construction baseline water quality monitoring.	Giles
204.4	None	Sinkhole	Yes	Shallow sinkhole approximately 250 feet left (northeast) of proposed alignment.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
204.4	None	Sinkhole and cave	Yes	Sinkhole is approximately 150 feet left (northeast) of MVP alignment. Conklin Sink Cave entrance is approximately 440 feet left (east) of alignment. Proposed MVP alignment crosses watershed surface drainage to Conklin Sink Cave.	Construction run-off and fluid discharge may impact the cave, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the sinkhole. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the cave and surface drainage(s) that lead northeast toward Conklin Sink Cave.	Giles
206.7	Minor	Swallet	No	Sinking stream dye traced to Doe Creek Spring on New River by VaDCR. 430 feet to right (west) of proposed alignment. No sink point was identified during field review (wet weather). Probably not an issue beyond standard E&S.	Construction run-off and fluid discharge may impact the swallet and surface drainage to the south-southwest.	Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off to the south-southwest, toward the swallet. See Note 2 at bottom of this table.	Giles
207.8	None	Sinkholes	Yes	Several sinkholes on east side of access road, approximately 1,000 feet right (southwest) of alignment.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Giles
208.0	Minor	Swallet, Losing stream	Yes	Crossing a losing stream. Multiple stream sink points mapped by desktop review approximately 760 feet left (northeast) of proposed alignment.	Potential for numerous small near surface voids and conduits under the sinking stream. Construction run-off and fluid discharge may impact the swallet and surface drainage to the south-southwest.	Geophysics. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off to the south- southwest, toward the swallet.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
208.0	Minor	Sinkhole and Cave	Yes	Proposed MVP alignment is on edge of sinkhole, to left (northeast).	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observation (10's of feet) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles
208.1	None	Cave	Yes	Pighole cave system located more than 1/4-mile left (northeast) of proposed alignment.	Proposed alignment was adjusted to avoid the cave system. No negative impacts anticipated at this time.	n/a	Giles
208.3	None	Cave	Yes	Echols Cave approximately 800 feet right (southwest) of alignment, and 150 feet above proposed access road.	Construction across or in the near vicinity of a cave may lead to impacts on that natural resource, and long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact the cave, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the cave. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the cave and surface drainage(s).	Giles
208.6	Moderate	Sinkhole	Yes	Proposed alignment crosses a shallow sinkhole.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust alignment northerly to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
208.7	Minor	Sinkholes	Yes	Numerous sinkholes left and right of alignment.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust alignment northerly to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles
208.9	Moderate	Sinkhole	Yes	Proposed alignment crosses a shallow sinkhole.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust alignment northerly to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles
209.5	None	Sinkhole	Yes	Several sinkholes mapped by desktop review within 500 feet left (northeast) of proposed MVP alignment. The MVP alignment ROW does not cross the local sinkhole watersheds.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Giles
209.8	None	Caves, Spring, Well	Yes	Tawneys Cave and Spring at base of hill and road embankment. Two cave entrances approximately 800 feet to left (northeast) of alignment. Extent of Tawney's cave does not extend beneath the alignment.	MVP alignment adjustment to the southwest avoids impact on Tawney's cave and associated karst features.	See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
210.4	None	Caves	Yes	Cave (Hog Hole No. 2). Reported as a small cave approximately 160 feet to right (southwest).	Construction across or in the near vicinity of a cave may lead to impacts on that natural resource, and long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact the cave, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the cave. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the cave and surface drainage(s).	Giles
211.7	None	Sinkhole	Yes	Sinkhole approximately 180 feet left (northeast) of alignment.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Giles
212.8	None	Sinkholes	Yes	Several sinkholes between 50 and 150 feet left (northwest) of the proposed alignment.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observation (10's of feet) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles
213.0	Moderate	Spring	Yes	Proposed alignment cuts immediately above a large spring at the convergence of two hollows.	Construction activities may impact spring flow patterns and may encounter conduit flow channels immediately behind the spring..	Adjust alignment to the north, downstream side, between MP 212.9 and MP 213.2 to avoid the spring. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the surface drainage(s).	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
213.2	None	Sinkholes	Yes	Several sinkholes greater than 800 feet right (southeast) of the proposed alignment, but in vicinity of a proposed access road.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust road construction as needed based on field observation (10's of feet) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles
213.5	None	Sinkholes	Yes	Two (2) sinkholes within 500 to 800 feet right (southwest) of the proposed alignment and near proposed access road.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observation (10's of feet) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles
213.6	Moderate	Spring	Yes	Large spring located approximately 300 feet left (northwest) and downstream of the proposed alignment.	Construction run-off and fluid discharge may impact spring.	See Notes 2 at bottom of this table.	Giles
213.7	Minor	Sinkhole	Yes	Sinkhole containing debris approximately 400 feet left (northwest) of proposed alignment. Alignment crosses watershed to sinkhole at approximately MP 213.8	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Giles
213.7	Minor	Sinkhole	Yes	Sinkhole approximately 160 feet left (northwest) of proposed alignment.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
213.7	Significant	Cave	Yes	Canoe Cave extends below alignment. The cave is approximately 1,000 feet in length. The cave entrance UTM coordinates are 547535, 4128962. The proposed alignment overlies the surface-projection of a portion of Canoe Cave. Very small sinkholes were observed at the ground surface during field confirmation of the cave location, suggesting that portion of the cave below the proposed alignment is relatively near the ground surface. Historic (1943) mapping of the cave indicated underground stream flow derived most likely from the northeast along the flank of the upland mountain ridge.	Construction across or in the near vicinity of a cave may lead to impacts on that natural resource, and long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact the cave, which may in turn lead to subsurface discharge to groundwater.	Adjust construction activities as needed based on field observation, on the order of a few hundred feet to the south (right of the current mapped alignment) to avoid direct encounter with area overlying cave. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the cave and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles
213.8	Minor	Sinkhole	Yes	Sinkhole approximately 60 feet right (southeast) of the proposed alignment.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observation to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
214.1	None	Several sinkholes	Yes	Sinkholes ranging from 400 to 1,000 feet left (northwest) of proposed alignment (and one possible sinkhole to right of alignment). Proposed alignment crosses watershed of the main sinkholes.	Construction run-off and fluid discharge may impact the sinkholes, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkholes. See Notes 3,4 at bottom of this table.	Giles
214.3	None	Sinkholes	Yes	Two sinkholes approximately 500 feet right (southeast) of proposed alignment.	Sinkholes are upstream of the proposed alignment. Nonetheless, construction run-off and fluid discharge may impact the sinkholes, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkholes. See Notes 3,4 at bottom of this table.	Giles
214.6	None	Sinkhole	Yes	Sinkholes approximately 300 feet left (northwest) of proposed alignment. Sinkhole is downstream of proposed alignment, which crosses the sinkhole watershed.	Construction run-off and fluid discharge may impact the sinkholes, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkholes. See Notes 3,4 at bottom of this table.	Giles

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
214.9	Minor	Cave, Stream insurgence	Yes	A possible cave with stream insurgence approximately 200 feet right (southeast) of the proposed alignment.	Proposed alignment crosses downstream of insurgence drainage, that appears to be associated with a possible small cave. This observation suggests that karst-related groundwater flow is relatively near the ground surface in the topographic drainage crossed by the alignment. Construction run-off and ground disturbance may impact the shallow groundwater system.	The proximity of the cave and insurgence within the topographic drainage crossed by the proposed alignment suggests that additional care and enhanced ESC should be implemented during construction activities. See Notes 3,4 at bottom of this table.	Giles
215.2	Minor	Cave, spring, stream insurgence and sinkholes	Yes	Jones Cave, a large spring, and sinkholes, one with a stream insurgence are 400 to 600 feet left (northwest) of the proposed alignment. The proposed alignment also crosses the watershed leading to the sinkholes and crosses the conveyance of a spring-fed stream where the spring is located upslope of the proposed alignment. A proposed access road is located near the sinkholes and Jones Cave.	Construction run-off and fluid discharge may impact the sinkholes, which may in turn lead to subsurface discharge to groundwater and/or the spring. Access road construction across or in the near vicinity of a cave or spring may lead to impacts on that natural resource, and long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact the cave, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkholes. The proposed access road construction alignment, as mapped, does not appear to directly encounter the cave. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkholes and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles / Craig

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
215.6	Minor	Sinkholes	Yes	Two (2) sinkholes approximately 70 feet right (southeast) of the proposed alignment, and a historic report of a filled sinkhole approximately 300 feet left (northwest) of the proposed alignment.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observation (10's of feet) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Giles / Craig
215.7	Minor	Sinkhole	Yes	Proposed alignment located along edge of a 1.2 Ac, 14 feet deep sinkhole.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching northwest as needed based on field observation (10's of feet) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Craig
215.8	Moderate	Sinkholes	Yes	Proposed alignment located along edge of a sinkhole.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching southeast as needed based on field observation (10's of feet) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Craig

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
215.8	None	Sinkholes	Yes	Sinkholes 150 to 400 feet left (northwest) of the proposed alignment.	Construction run-off and fluid discharge may impact the sinkholes, which may in turn lead to subsurface discharge to groundwater.	The proposed construction alignment, as mapped, does not appear to directly encounter the sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkholes. See Notes 3,4 at bottom of this table.	Craig
216.8	None	Sinkhole	Yes	A sinkhole is located approximately 300 feet left (north) of the proposed alignment. The alignment crosses the local watershed that leads to the sinkhole.	Construction across or in near vicinity of sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Implement construction ESC to prevent run-off into the sinkhole. Ensure that construction ESC prevents run-off to north along topographic drainage.	Craig
216.8	Moderate	Cave and stream resurgence sinkhole	Yes	Cave, stream resurgence within a sinkhole approximately 140 feet left (northeast), and about 40 feet down a very steep hill from the proposed alignment.	The proposed alignment proceeds up a ridge alongside the edge of the watershed for a stream that sinks into an open throat sinkhole at a potential cave entrance. This observation suggests the karst groundwater flow could be relatively near the ground surface in the immediate area. Construction run-off and ground disturbance may impact the shallow groundwater system and karst resources.	The proximity of the cave, stream resurgence, and groundwater flow patterns within the topographic drainage adjacent to the proposed alignment suggests that additional care and enhanced ESC should be implemented during construction activities. See Notes 3,4 at bottom of this table.	Craig

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
220.6	Minor	Contact - Pulaski Fault, begin dolomite. Begin Mount Tabor sinkhole plain	Yes	Approximate beginning of Mt Tabor sinkhole plain (MP 220.63 to 222.10). Approximate location of Pulaski Fault. Geology is poorly mapped in this area. This area is historically known to have extensive and well documented cave and karst development. Extensive sinkhole development and karst water flow eastward to TNC-DCR natural area preserve. A DCR dye trace study conducted in 2004 in sinkholes located in the vicinity of what is now MP 220.8 indicated that karst water flow from the sinkholes trended toward Slussers Chapel Cave and further on to Mill Creek Cave and spring. This area includes Fred Bulls Cave (MP 220.66) and several smaller cave features, sinkholes within the proposed alignment footprint, and many sinkholes and insurgences.	The proposed MVP pipeline encounters the Mount Table Sinkhole Plain as it progresses from MP 220.63. Karst features including sinkholes, swallets and caves, are intensely and densely developed in this area. There is potential for negative impact on karst resources and water resources, as well as potential for ground instability risk to pipeline.	The density of karst features in this area (i.e., from MP 220.63 to 222.10) will likely require several minor adjustments during construction to avoid sinkholes, and also likely to require stabilization and mitigation efforts. Refer to Notes 2, 3 and 4 at end of this table.	Montgomery
220.7	Minor	Cave, sinkhole, and sinking stream insurgence	Yes	A sinking stream and related cave are located 800 feet to 1200 feet east of the alignment in a very large sinkhole. VaDCR dye trace 2004 shows flow to Slussers Chapel Cave, then to Mill Creek Cave and Spring.	See Concerns for MP 220.63.	See Recommendations for MP 220.63.	Montgomery

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
221.0	Minor	Spring, cave, sinkhole and wet-weather insurgence	Yes	Spring at 650 feet left, very large sinkhole with stream insurgence and small cave at approximately 1,200 feet left (east) of the proposed alignment. VaDCR dye trace 2004 shows flow to Slussers Chapel Cave, then to Mill Creek Cave and Spring.	The proposed alignment crosses the surface drainage upstream of the sinkhole and related features. The source water of the spring is unknown. Construction run-off and ground disturbance may impact the shallow groundwater system and karst resources.	The spring, sinkhole, and insurgence being downstream of the proposed alignment and construction activities suggests that additional care and enhanced ESC should be implemented during construction activities. See Notes 3,4 at bottom of this table.	Montgomery
220.9	Minor	Coal Mines and wet weather insurgence	Yes	Area of historic coal mining, numerous surface pits, mounds, and one tunnel were observed. A collapse implies additional tunnels may be present. A wet weather insurgence about 250 feet left is probably sinking into abandoned mine workings. These features were misidentified by commenter to FERC as karst-related cave and sinkholes.	Ground stability related to historic, abandoned coal workings. Addressed elsewhere in non-karst module of Resource Reports.	Refer to non-karst module of Resource Report. These features are not considered a karst-related hazard.	Montgomery
221.0	Minor	Sinkhole	Yes	Crossing Pulaski Fault and start of dolomite.	Begin area of potential karstification.	Additional care and enhanced ESC should be implemented during construction activities in this area.	Montgomery
221.1	None	Sinkhole	Yes	Sinkhole karst window located more than 1/4-mile left (northeast) of proposed alignment.	Distance separating feature from proposed alignment reduces potential for impact to negligible.	n/a	Montgomery
221.1	Minor	Sinkhole	Yes	Numerous sinkholes are located in the vicinity of the proposed alignment.	See Concerns for MP 220.63.	See Recommendations for MP 220.63.	Montgomery

APPENDIX L (continued)							
Karst Features Identified Within 0.25 mile of the Mountain Valley Project							
MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
221.3	None	Sinkhole	Yes	A sinkhole is located 70 feet right (west) of the proposed alignment.	See Concerns for MP 220.63.	See Recommendations for MP 220.63.	Montgomery
221.4	Minor	Sinkhole	Yes	A compound sinkhole is located immediately right (south) of the proposed alignment, with an open throat ~100 feet distant.	See Concerns for MP 220.63.	See Recommendations for MP 220.63.	Montgomery
221.8	Minor	Sinkhole	Yes	Proposed alignment located along edge of a sinkhole.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observation to avoid direct encounter with sinkhole. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Montgomery
222.2	Moderate	Sinkholes	Yes	Multiple sinkholes in vicinity of proposed alignment. The proposed alignment is located along edge and between two sinkholes in particular.	Construction across sinkholes, or narrow ridge separating two sinkholes, may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust alignment as needed to avoid two prominent sinkholes, possibly southward by crossing under the electric line at MP 222.05 instead of MP 222.80, while maintaining parallel co-location. Ground stabilization and sinkhole mitigation is likely required. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Montgomery

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
222.3	None	Contact - End Ellbrook dolomite. Approximate end of Mount Tabor Sinkhole Plain	Yes	Geologic contact, Ellbrook - Conococheague dolomite, approximate end of high density karst features found in the Mount Tabor Sinkhole Plain.	Dolomite continues, but karstification is much less dense.	n/a	Montgomery
222.9	None	Cave	No	A 90 foot deep vertical surface shaft, Zipper Pit, is located about 1600 feet left (north) of the alignment.	This cave illustrates the potential for deep voids intersecting the surface or near surface in the area.	n/a	Montgomery
222.9	Minor	Spring	Yes	A spring is located 325 feet right (south) of the alignment.	There is potential for impacts on water resources from construction.	See Note 2 at bottom of this table.	Montgomery
223.5	Moderate	Sinkholes	Yes	Large deep open throat sinkhole within 100 to 250 feet left (northeast) of MVP alignment. A second smaller open throat sinkhole is located about 200 feet left of MP 223.55.	Construction near a sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching to as needed to avoid direct encounter with sinkhole. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Montgomery
223.5	Moderate	Wet weather spring	Yes	A wet weather spring is located in the proposed access road 570 feet right, south, and downhill of the MVP alignment.	Road construction over spring site could impact flow patterns.	Adjust road construction or location as needed to avoid direct encounter with spring. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into surface drainage(s).	Montgomery

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
224.3	None	Cave, Springs	Yes	Old Mill Cave and three springs, the resurgences from Dry Branch, ~7,200 feet northeast, are located approximately ~2,000 feet right (south) of MVP alignment. Va DCR dye trace studied show flow connection under the ridge that the alignment crosses.	There is potential for impacts on water resources from construction.	See Note 2 at bottom of this table.	Montgomery
224.5	Minor	Sinkhole	Yes	Sinkhole is located within 150 feet right (South) of proposed MVP alignment. Virginia DCR dye trace study indicated flow from Dry Branch passes under this ridge.	Construction run-off and fluid discharge may impact sinkhole and surface water (see note on dye trace study).	See Notes 3,4 at bottom of this table.	Montgomery
224.6	Moderate	Caves, Sinkholes	Yes	Two cave entrances within 160 feet of proposed alignment, Hancock's Blowhole Caves No 1 and No 2. Also, and several sinkholes located 200 to 250 feet right (southwest) of proposed MVP alignment. This is also in the vicinity of the south edge of the APCO high voltage power line easement. A small spring is located approximately 800 feet right (southwest) of the alignment, within a drainage leading from the sinkholes.	The proposed alignment is routed over and in the near vicinity of two caves. Impacts on cave resources are a concern regarding pipeline construction. Ground stability is a concern for pipeline integrity if the caves are extensive. A thin overburden mantle to shallow bedrock presents risk for rapid infiltration of construction-related or operations-related fluid to the subsurface.	Avoidance of these caves is recommended. (Flagged route was on northeast side of electric line, away from these features.) See notes 2, 3 and 4 at end of this table.	Montgomery
224.7	Minor	Sinkhole lineament	Yes	Several sinkholes were found in a linear distribution approximately 250 to 600 feet left (northeast) of MVP alignment.	This cluster of sinkholes may represent voids, a fracture, or zone of weakness in the bedrock. There is a possibility of unconsolidated bedrock along this lineament extended.	Refer to Karst Mitigation Plan in RR6 for more detailed recommendations for construction in this area. See Notes 3,4 at bottom of this table.	Montgomery

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
224.9	None	Cave	Yes	Thompsons Cave mapped by desktop review, approximately 1,200 feet to right (south) of proposed alignment.	Construction run-off and fluid discharge may impact cave.	See Notes 3,4 at bottom of this table.	Montgomery
224.9	Minor	Possible cave	Yes	A possible cave entrance in a shallow sinkhole was located approximately 200 feet left (north) of proposed alignment.	Depending on actual route this feature may or may not be in the area of concern (the flagged route was easterly of the planning alignment).	See Notes 3,4 at bottom of this table.	Montgomery
224.9	Minor	Sinkhole	Yes	A sinkhole was observed approximately 60 feet to the right (south) of the proposed alignment.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed to avoid direct encounter with sinkhole. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s).	Montgomery
225.0	Moderate	Spring	Yes	Farm spring observed within 50 feet of proposed alignment. The spring is at the contact of a band of shale; a line of sinkholes is formed along this band to the northeast. Water likely flows along this contact.	Alignment and route flagging appears close enough to the spring that trenching could potentially cut the flow path immediately behind the spring disrupting water flow. Construction run-off and fluid discharge may impact the farm spring.	Adjust left to avoid impact. Refer to Note 2 at end of this table regarding baseline water quality testing recommendations for the farm spring. Refer to Karst Mitigation Plan in RR6 for more detailed recommendations for construction in this area.	Montgomery
225.0	Minor	Sinkhole lineament	Yes	Several sinkholes are mapped by desktop review within a linear cluster roughly perpendicular to the proposed MVP pipeline, ranging from approximately 200 to 2,000 feet to left (northeast).	This lineament may represent a fracture or zone of weakness in the bedrock. There is a possibility of unconsolidated bedrock along this lineament extended.	See Notes 3,4 at bottom of this table.	Montgomery

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
225.5	None	Spring, Cave	Yes	Johnsons spring, water probably from the hollow to (northeast). Johnsons Cave carries a small stream and is approximately 400 feet right (southwest) of proposed MVP alignment. Several sinkholes located near Johnsons Cave and spring.	There is potential for impacts on cave stream, and water resources from construction.	See Notes 2, 3, 5 at bottom of this table.	Montgomery
225.9	Minor	Sinkhole lineament	Yes	Sinkholes observed right (west).	This lineament may represent a fracture or zone of weakness in the bedrock. There is a possibility of unconsolidated bedrock along this lineament extended.	See Notes 3,4 at bottom of this table.	Montgomery
225.9	Minor	Losing Stream, Insurgence	Yes	Losing stream and wet weather insurgence was observed approximately 100 feet right of proposed MVP alignment. May be associated with sinkhole lineament along ridge. Very likely the source of the water flowing through Johnsons Cave and spring.	Potential unconsolidated bedrock, small voids along stream way. Pipeline construction may impact subsurface water resources in this losing stream environment.	Ensure construction ESC retains fluids and sediment in the construction footprint. Refer to Note 2 at end of this table.	Montgomery
226.0	Minor	Stream insurgence	Yes	Stream insurgence was observed approximately 30 feet left of farm road / proposed access road. May be associated with sinkhole lineament along ridge. Very likely contributes to the water flowing through Johnsons Cave and spring.	There is potential for impacts on subsurface stream, and water resources from access road use or improvements.	Ensure construction ESC retains fluids and sediment in the construction footprint. Refer to Note 2 at end of this table.	Montgomery

APPENDIX L (continued)

Karst Features Identified Within 0.25 mile of the Mountain Valley Project

MP	Level of Concern	Feature Identification <u>a/</u>	Field Confirmed?	Description of Feature	Potential Hazard and Concerns	Construction Recommendations <u>a/</u>	County
233.1	Minor	Sinkhole	Yes	Proposed alignment along steep edge of a 1.0 Ac., 34 foot deep sinkhole.	Construction across sinkhole may lead to long-term differential settlement and pipeline instability. Construction run-off and fluid discharge may impact sinkhole, which may in turn lead to subsurface discharge to groundwater.	Adjust construction trenching as needed based on field observation (10's of feet right, or to other side) to avoid direct encounter with sinkholes. Ensure construction ESC will retain fluid and sediment within construction footprint, and prevent run-off into the sinkhole and surface drainage(s). See Notes 3,4 at bottom of this table.	Montgomery
233.4	None	Sinkhole	Yes	Several sinkholes approximately 400 feet left (east) of in this portion of the proposed alignment.	Construction run-off and fluid discharge may impact sinkhole.	See Notes 3,4 at bottom of this table.	Montgomery

Source: Draper Aden Associates, 2015a

- a/
- (1)- See Karst Mitigation Plan for recommendations if a previously unidentified karst feature is encountered during construction.
 - (2) - See Karst Area Baseline Water Resources Testing Plan for a detailed catalogue and recommendations regarding water resources and water supplies encountered by the proposed alignment within karst terrain.
 - (3) - All recommendations include the overall statements: 1) do not discharge fluids to the ground and particularly not into a sinkhole or cave or drainage leading thereto; 2) implement Project Erosion-Sediment Control in accordance with all local and state regulations and ordinances.
 - (4) - Where sinkholes are mapped or observed within the construction right-of-way, the recommendation is made to adjust the trench footprint as needed to avoid the sinkhole. If avoidance is not possible, refer to Karst Mitigation Plan for recommendations on sinkhole stabilization.
